Modulating Aging and Longevity S.I. Rattan, 2003-09-30 After decades of systematic collection of data describing age related changes in organisms organs tissues cells and macromolecules biogerontologists are now in a position to construct general principles of ageing and explore various possibilities of intervention using rational approaches While not giving serious consideration to the claims made by charlatans it cannot be ignored that several researchers are making genuine attempts to test and develop various means of intervention for the prevention and treatment of age related diseases for regaining the functional abilities and for prolonging the lifespan of experimental organisms This book provides the most up to date information and a critical evaluation of a variety of approaches being tried for modulating aging and longevity including dietary supplementation with antioxidants vitamins and hormones genetic engineering life style alterations and hormesis through mild stress The goal of research on ageing is not to increase human longevity regardless of the consequences but to increase active longevity free from disability and functional dependence *Ageing and Nutrition through Lifespan* Stefanos Tyrovolas, 2020-12-29 Population is ageing at an unprecedented speed globally As concept ageing is considered a continuous process starting from birth and is accompanied by various physiological changes and a number of chronic diseases that affect health and quality of life Ageing as a continuous process is depending on life course exposures to health risks lifestyle and nutrition socioeconomic background and other factors There is considerable interest among scientists regarding the direct and indirect effect of nutrition in optimal ageing Nutrition has a beneficial effect in a variety of chronic disease that impact the process of ageing Given the importance of this issue the journal Nutrients is planning a Special Issue on Ageing and Nutrition through Lifespan with the aim of providing a source for accurate up to date scientific information on this topic We invite you and your co workers to consider submission of your original research findings or a review article on the topic Manuscripts should focus on the direct impact of specific food components dietary patterns energy intake macro micro nutrients alcohol intake food insecurity as well as malnourishment and appetite to the ageing process healthy active successful ageing frailty and other similar indices across lifespan In a similar way we also welcome manuscripts that focus on the indirect effect of nutrition to the ageing process throughout the pathway of chronic disease i e obesity diabetes depression and mental diseases Nutrition Across the Lifespan for Healthy Aging National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Food and Nutrition Board, Food Forum, 2017-05-11 In September 2016 the National Academies of Sciences Engineering and Medicine convened a workshop to examine trends and patterns in aging and factors related to healthy aging in the United States with a focus on nutrition and how nutrition can sustain and promote healthy aging not just in late adulthood but beginning in pregnancy and early childhood and extending throughout the lifespan Participants discussed the role of nutrition in the aging process at various stages in life changes in organ systems over the lifespan and changes that occur with age related to cognitive brain and mental health and explored opportunities to

move forward in promoting healthy aging in the United States This publication summarizes the presentations and discussions from the workshop Multivitamins vs Single Vitamins Jenny Smith, AI, 2025-02-15 Multivitamins vs Single Vitamins explores the science behind vitamin supplementation helping readers make informed choices about their health regimen The book tackles a common dilemma whether to opt for a broad spectrum multivitamin or target specific nutrient needs with single vitamins A key focus is bioavailability how well your body absorbs a vitamin which directly impacts its effectiveness Individual nutrient requirements are also examined emphasizing that what works for one person may not work for another due to factors like age lifestyle and underlying health conditions The book progresses logically by first defining key concepts related to vitamins and minerals It then scrutinizes the science behind multivitamins examining their benefits and limitations based on research Later chapters delve into individual vitamins exploring their roles in the body optimal dosages and potential deficiencies This approach helps readers understand that the optimal approach hinges on understanding individual needs rather than a one size fits all multivitamin The book offers evidence based guidance supported by scientific studies to empower readers in personalizing their vitamin supplementation
