

# EXPERIMENT VS OBSERVATIONAL STUDY

## EXPERIMENT

An experiment is a method of scientific inquiry where the researcher systematically manipulates one or more variables to determine their effect on a specific outcome. This approach allows for controlled conditions, which can establish causality between the manipulated variables and the observed results.

## OBSERVATIONAL STUDY

An observational study involves the investigator observing and collecting data without directly manipulating any variables. The researcher records occurrences naturally happening in the environment, providing insight into correlations between variables, but it does not establish causation like an experiment.
