

Practice Exam 2B

1. (25%) Analyze and make predictions about the directionality and extent, for a variety of reactions (Exam 1A/B)
2. Given a mechanism, determine the overall rate law, identify the rate-limiting step, explain the significance of the rate limiting step. Identify intermediates and catalysts.
3. Determine a mechanism from a detailed energy diagram, sketch an energy diagram from a mechanism. Each step of the mechanism should be analyzed using the qualitative and quantitative analysis of Unit 5 modules 1 and 2.
4. Calculate the rate (or ratio of rates) at any temperature given the activation energy.
5. Calculate the activation energy based on the ratio of rates and temperatures or from the appropriate plot of k vs T . Calculate a specific temperature for a specific rate or ratio of rates given activation energy.
6. Explain how catalysis affects the rate and extent of a chemical reaction.
7. Analyze concentration vs time data or plots to identify the rate law with respect to a particular variable. Use the rate law to determine change in rate based on changes in initial concentrations.
8. Plot/identify rate vs concentration, concentration vs time and determine the concentration at any time, the time it takes to obtain a particular concentration for 0th, 1st and 2nd order. Determine the rate constant.

Griswold,2002-06-01 Role of the Southern Ocean in Atmospheric pCO₂ Change: Observations, Simulations and

Paleorecords Zhifang Xiong,Di Qi,Xu Zhang,Thomas Algeo,Jun Zhao,2025-01-02 The Southern Ocean plays a key role in atmospheric CO₂ sequestration accounting for 40 50% of the anthropogenic CO₂ absorbed by the modern ocean The size of this sink is attributed to strong watermass sinking i e mode intermediate water and bottom water formation which transports

carbon to the mid and deep ocean thus isolating it from the atmosphere for centuries The Southern Ocean also played a critical role in atmospheric pCO₂ variations in the geologic past on both orbital and millennial timescales Moreover the Southern Ocean modulates atmospheric and oceanic circulation in the tropics remotely influencing low latitude atmospheric CO₂ exchange Thus the Southern Ocean is a key component of the global climate system whose operation must be better understood at a range of timescales in order to accurately assess its effects on atmospheric pCO₂ in the future This Research Topic will consist of a set of cutting edge investigations of the processes and mechanisms of Southern Ocean influence on atmospheric pCO₂ and global climate change
