## Pisot And Salem Numbers:

**Pisot and Salem Numbers** Marie J. Bertin, Annette Decomps-Guilloux, Marthe Grandet-Hugot, Martine Pathiaux-Delefosse, Jean Schreiber, 2012-12-06 The attention of the mathematical community to those marvelous numbers now known as the Pisot numbers or the Pisot-Vijayaraghavan numbers Although these numbers had been discovered earlier by A. Thue and then by G. H. Hardy it was Pisot's result in that paper of 1938 that provided the link to harmonic analysis as discovered by Raphaël Salem and described in a series of papers in the 1940s In one of these papers Salem introduced the related class of numbers now universally known as the Salem numbers These two sets of algebraic numbers are distinguished by some striking arithmetic properties that account for their appearance in many diverse areas of mathematics harmonic analysis ergodic theory dynamical systems and algebraic groups Until now the best known and most accessible introduction to these numbers has been the beautiful little monograph of Salem *Algebraic Numbers and Fourier Analysis* first published in 1963 Since the publication of Salem's book however there has been much progress in the study of these numbers Pisot had long expressed the desire to publish an up to date account of this work but his death in 1984 left this task unfulfilled Pisot and Salem Numbers Marie José Bertin, Annette Decomps-Guilloux, 1992 *Pisot and Salem Numbers from Polynomials of Height One* Keshav Mukunda, 2007 We will be primarily concerned with two special kinds of real algebraic integers called Pisot and Salem numbers both of which are characterized by the location of their conjugates in relation to the unit circle in the complex plane While both types of numbers have been studied extensively for many years certain important questions about Pisot numbers are generally better understood than corresponding questions about Salem numbers In 1978 David Boyd extending earlier work done by Jacques Dufresnoy and Charles Pisot in the 1950s constructed an algorithm to generate all Pisot numbers in any given finite interval of the real line Using this algorithm we describe all Pisot numbers whose minimal polynomial is a Littlewood polynomial one with coefficients  $\pm 1$  These are examples of polynomials that are said to have height 1 the height of a polynomial being simply the largest coefficient in absolute value We show that every such Pisot number is a limit point from both sides of sequences of Salem numbers that are roots of Littlewood polynomials We also consider analogous questions for another subset of Height 1 polynomials those with coefficients  $0, 1$  Such polynomials under a suitable normalization have been called Newman polynomials We describe all Pisot numbers whose minimal polynomial is derived from a Newman polynomial and show that each Pisot number of this kind is also a limit from both sides of sequences of Salem numbers derived from Newman polynomials Finally we investigate some similarities and differences between the sets of Littlewood and Newman polynomials especially in connection with their roots One indicator of the location of these roots is the Mahler measure which for a monic polynomial is defined as the product of the absolute values of those roots that lie outside the unit circle Another indicator of the location of roots is the number that lie on the unit circle and we investigate both types of polynomials with palindromic
