Fine-Tuning in the Physical Universe David Sloan, Rafael Alves Batista, Michael Townsen Hicks, Roger Davies, 2020-10-29 Is the universe fine tuned for complexity life or something else This comprehensive overview of fine tuning arguments in physics with contributions from leading researchers in their fields sheds light on this often used but seldom understood topic Each chapter reviews a specific subject in modern physics such as dark energy inflation or solar system formation and discusses whether any parameters in our current theories appear to be fine tuned and if so to what degree Connections and differences between these fine tuning arguments are made clear and detailed mathematical derivations of various fine tuned parameters are given This accessible yet precise introduction to fine tuning in physics will aid students and researchers across astrophysics atomic and particle

General Relativity: The most beautiful of theories Carlo Rovelli, 2015-02-17 Generalising Newton's law of gravitation general relativity is one of the pillars of modern physics While applications in the beginning were restricted to isolated effects such as a proper understanding of Mercury's orbit the second half of the twentieth century saw a massive development of applications These include cosmology gravitational waves and even very practical results for satellite based positioning systems as well as different approaches to unite general relativity with another very successful branch of physics quantum theory On the occasion of general relativity's centennial leading scientists in the different branches of gravitational research review the history and recent advances in the main fields of applications of the theory which was referred to by Lev Landau as the most beautiful of the existing physical theories Contributions from Andy C Fabian Anthony L Lasenby Astrophysical black Holes Neil Ashby GNSS and other applications of General Relativity Gene Byrd Arthur Chernin Pekka Teerikorpi Mauri Vaaltonen Observations of general Relativity at strong and weak limits Ignazio Ciufolini General Relativity and dragging of inertial frames Carlo Rovelli The strange world of quantum spacetime

Proceedings of the Eleventh Marcel Grossmann Meeting on General Relativity Hagen Kleinert, Robert T. Jantzen, Remo Ruffini, 2008 The Marcel Grossmann Meetings are three yearly forums that meet to discuss recent advances in gravitation general relativity and relativistic field theories emphasizing their mathematical foundations physical predictions and experimental tests These meetings aim to facilitate the exchange of ideas among scientists to deepen our understanding of space time structures and to review the status of ongoing experiments and observations testing Einstein's theory of gravitation either from ground or space based experiments Since the first meeting in 1975 in Trieste Italy which was established by Remo Ruffini and Abdus Salam the range of topics presented at these meetings has gradually widened to accommodate issues of major scientific interest and attendance has grown to attract more than 900 participants from over 80 countries This proceedings volume of the eleventh meeting in the series held in Berlin in 2006 highlights and records the developments and applications of Einstein's theory in diverse areas ranging from fundamental field theories to particle physics astrophysics and cosmology made possible by unprecedented technological developments in experimental

and observational techniques from space ground and underground observatories It provides a broad sampling of the current work in the field especially relativistic astrophysics including many reviews by leading figures in the research community
