*Understanding Obesity to Determine the Best Therapeutic Option: From Lifestyle Interventions to Therapies* Evelyn Frias-Toral, Jorge Carriel-Mancilla, Florencia Ceriani, Almino Ramos, 2025-02-21 We are currently facing an obesity pandemic that affects individuals of all age groups geographic areas and social status among others Thus it is essential to generate high quality scientific evidence to better understand this pathology its risk factors and its treatments Several modifiable and non modifiable risk factors for the development of obesity have been identified It has been demonstrated that obese patients have an increased risk of acquiring arterial hypertension diabetes dyslipidemia cardiovascular diseases cancer and other chronic conditions In order to take efficient actions to reverse or prevent these complications it is also crucial to delve into body composition lean mass fat bone mass and sarcopenia in patients with obesity In recent months there have been developments in pharmacological therapies using GLP 1 GIP and glucagon agonists which seem to change the rules of the game regarding therapeutic decision making in these patients worldwide However surgical techniques such as sleeve gastrectomy and Roux en Y gastric bypass continue to be the most effective and definitive interventions to achieve adequate weight loss in patients with obesity Despite the pharmacological development none of the clinical trials have shown that the operated patients reach more than 30% of the total body weight as with bariatric surgery techniques Furthermore it is fundamental to analyze the impact of diverse therapeutic non surgical and non pharmacological options to address obesity such as cognitive behavioral interventions and different types of diets in combination with physical activity

**Fat and Unhappy** Tristan Justice, Gina Bontempo, 2024-12-03 More than seventy years after Americans dutifully embraced the low fat diet in an era of industrialized food a nation left fat sick and depressed three generations later are now desperately looking for answers to combat the twin epidemics of obesity and chronic disease The contemporary phenomenon to promote body positivity under the banner of health at every size however is another corporate sponsored movement to accept obesity and chronic illness as the new norm while fundamentally transforming our healthcare system into a sick care system Big Food and Big Pharma have accomplished what Big Tobacco tried but failed hook generations of consumers on biochemically addictive products and discredit the consequences Everybody knows smoking kills Few understand that cereal will too The modern message of body positivity is an emotionally tempting doctrine to a public rightly frustrated by the guidance of the so called experts but in reality it remains a trojan horse for the food and medical industries to prey on the physical insecurities and emotional turbulence of lifelong customers
