Learning First, Technology Second in Practice Liz Kolb, 2020 After observing teachers and students interact with technology over many years Liz Kolb began to wonder How do we move students from a high attention low commitment to learning with digital devices to a high attention high commitment to learning tasks Her observations led her down a path of extensive research that informed the development of the Triple E Framework covered in the 2017 ISTE book Learning First Technology Second Kolb found that teachers needed a framework based on good learning practices with technology rather than a focus on technology tools themselves With this in mind she developed the Triple E Framework in which the learning goal not the tool is the most important element of a given lesson Understanding how students learn is built into the Triple E Framework allowing teachers to choose the tool and pedagogical strategies that best fit the learning goal Ultimately the Triple E Framework is meant to support the teacher in making choices with technology and instructional strategies based on the learning goal and the science of learning For Learning First Technology Second readers this book will build on their knowledge providing a brief overview as well as new research scenarios cases and ideas for using technology in education For readers new to the framework this book will provide all of the essential research and tools mentioned above along with an overview of the framework so they can apply what they learn without missing a beat [Video Based Machine Learning for Traffic Intersections](#) Tania Banerjee, Xiaohui Huang, Aotian Wu, Ke Chen, Anand Rangarajan, Sanjay Ranka, 2023-10-17 Video Based Machine Learning for Traffic Intersections describes the development of computer vision and machine learning based applications for Intelligent Transportation Systems ITS and the challenges encountered during their deployment This book presents several novel approaches including a two stream convolutional network architecture for vehicle detection tracking and near miss detection an unsupervised approach to detect near misses in fisheye intersection videos using a deep learning model combined with a camera calibration and spline based mapping method and algorithms that utilize video analysis and signal timing data to accurately detect and categorize events based on the phase and type of conflict in pedestrian vehicle and vehicle vehicle interactions The book makes use of a real time trajectory prediction approach combined with aligned Google Maps information to estimate vehicle travel time across multiple intersections Novel visualization software designed by the authors to serve traffic practitioners is used to analyze the efficiency and safety of intersections The software offers two modes a streaming mode and a historical mode both of which are useful to traffic engineers who need to quickly analyze trajectories to better understand traffic behavior at an intersection Overall this book presents a comprehensive overview of the application of computer vision and machine learning to solve transportation related problems Video Based Machine Learning for Traffic Intersections demonstrates how these techniques can be used to improve safety efficiency and traffic flow as well as identify potential conflicts and issues before they occur The range of novel approaches and techniques presented offers a glimpse of the exciting possibilities that lie ahead for ITS research and

Priority-Zone Mapping for Reforestation Larissa Böhrkircher, Michael Leuchner, Fabio Bayro Kaiser, Christa Reicher, 2023-02-02 Andean dry forest ecosystems are threatened by deforestation and unsustainable land use methods The negative effects for the livelihood of the local population biodiversity and the regional climate could be countered by reforestation measures however dry land forests have not attracted the same level of interest and investment like other ecosystems This book describes the development of a priority zone map for reforestation measures showing where reforestation might have the greatest social and ecological benefits To achieve this a problem analysis of a case study region is conducted and thematic reforestation benefits are determined Using remote sensing and GIS the areas where benefits can be obtained are mapped in individual layers and compiled into a summarizing priority zone map It is thus possible to identify areas where reforestation would achieve multiple benefits The concept of priority maps could be used to facilitate reforestation strategies by local communities and

municipal governments and could thus contribute to initiate an integrated forest and landscape restoration of the Bolivian montane dry forests
