Practicing to Aim at Truth Ryan Andrew Newson, Brad J. Kallenberg, 2015-10-16 Beginning with her award winning book *Theology in the Age of Scientific Reasoning* 1990 Nancey Murphy has used philosophy of science as a way into and catalyst for fresh thinking in cosmology divine action epistemology cognitive neuroscience theological anthropology philosophy of mind and Christian virtue ethics The essays in this book written by her students and colleagues creatively

honor Murphy by extending a number of her core insights within their respective disciplines An introduction provides both an account of Murphy's unique location as an Anabaptist teaching at an evangelical graduate institution and a summary of her contributions to theology as a philosopher of science whose corpus more than any other epitomizes the paradigm shift in philosophy sometimes called Anglo American postmodernity Subsequently fourteen essays provide unique engagements with Murphy on subjects including divine action the interaction between science and theology epistemology the nature of humanity and political theology In its entirety *Practicing to Aim at Truth* provides the first in depth interaction with and extension of Nancey Murphy's unique school of thought providing a resource both for those wishing to extend her research program as well as those wishing to understand it charitably in order to critique it *Can There Be A Philosophy of Archaeology?* William Harvey Krieger, 2006-08-24 *Can There Be a Philosophy of Archaeology* provides a historical and philosophical analysis of the rise and fall of the philosophical movement known as logical positivism focusing on the effect of that movement on the budding science of archaeology Significant problems resulted from the grafting of logical positivism onto what became known as processual or new archaeology and as a result of this failure archaeologists distanced themselves from philosophers of science believing that archaeology would be best served by a return to the dirt By means of a thorough analysis of the real reasons for failures of logical empiricism and the new archaeology as well as a series of archaeological case studies Krieger shows the need for the resumption of dialogue and collaboration between the two groups In an age where philosophers of science are just beginning to look beyond the standard examples of scientific practice this book demonstrates that archaeological science can hold its own with other sciences and will be of interest to archaeologists and philosophers of science alike **Bringing Communities Together** Bev France, Vicki Compton, 2012-07-30 Over recent years connective partnerships between educational communities and sectors outside of education have become increasingly popular One significant reason behind this popularity has been the expansion of information and communication technologies which have increased access and provided mechanisms for ongoing connections to be made between differing worlds But successful connections that cross cultural boundaries are not easy to establish and even harder to maintain in ways that are mutually beneficial This book focuses on science and technology connective ventures and the complexity inherent in bringing such worlds together The authors have been in the business of developing such connections and this book brings them together to describe how and why making connections can support the science technology education sector the technology science communities and the wider sociocultural life we all inhabit A range of illustrative examples of connections in action provide an empirical basis from which to explore and gain insight into the issues for and potential of such connective ventures alongside a rich mix of critical commentary arguments cautions and challenges Five key principles have been distilled from the collective experience and wisdom of the authors serving to capture that which underpins effective and efficient connective initiatives Each principle is accompanied by a set of questions that reflect the issues raised and

successes illustrated throughout the book It is hoped these principles and questions will serve to guide people interested in developing funding and or participating in future connective initiatives in the fields of science and technology

The Meaning of Learning and Knowing Erik Jan van Rossum, Rebecca Hamer, 2010-01-01 The Meaning of Learning and Knowing co authored by Erik Jan van Rossum and Rebecca Hamer brings together empirical studies on epistemology student thinking teacher thinking educational policy and staff development forging a solid and practical foundation for educational innovation Since the 1980s they developed and published about a six stage developmental model describing the qualitatively different ways students and teachers view learning and good teaching A model with far reaching consequences for education educational innovation and democratic society Their comprehensive review of research from many disciplines underpins the empirical evidence of over 650 students and teachers Each of the six worldviews results in a unique way of meaning making These six Ways of Knowing or Orders of Consciousness are characterised by increasing complexity of thinking with fourth level thinking or self authorship representing the most common espoused goal of higher education Ample evidence is presented that higher education is not attaining its own espoused goals One explanation may be that many teachers in higher education have not themselves reached the minimum required way of knowing preventing them from constructing a developmental path for their students Van Rossum and Hamer s epistemological model provides clear signposts on the developmental education highway and has proven its worth as an instrument for curriculum design measurement of epistemological development and as a tool for staff development
