 Chen,Chwan-Yau Luo,Dominique Shum-Tim,2015-07-02 Type A acute aortic dissection TAAAD is an acute cardiovascular
 condition that is normally associated with genetic conditions such as Marfan Syndrome but it can also occur in patients with
 no known predisposing risk factors TAAAD is associated with extremely high mortality over 20% of documented cases in
 medical literature if not addressed on time Surgical management of TAAAD also varies tremendously depending on the
 causative pathology Techniques to manage TAAAD cover the entire spectrum of methods employed in cardiac surgery
 ranging from a simple replacement of the ascending aorta to aortic root sparing or replacement and an aortocoronary bypass
 to total arch and descending aortic stenting involving hypothermic circulatory arrest or other cerebral protection strategies
 New medical evidence suggests that concomitant intraoperative management of the arch and descending aorta minimizes
 the need for subsequent surgeries in patients who are operated upon for TAAAD Coupled with new diagnostic technology
 available to medical professionals better long term patient outcomes for TAAAD treatment are now a reality Recent Advances
 in Acute Type A Aortic Dissection presents a collection of comprehensive reviews from many experts on TAAAD Cardiac
 surgeons can benefit from this volume by learning about current medical opinions and consensus on risk factors including
 genetic predisposition diagnostic modalities intraoperative management surgical options cerebral protection strategies and
 long term follow up procedures on acute TAAAD **Book Chat ,1888 Recent Advances in Diagnosis and Treatment of
Brain Tumors: From Pediatrics to Adults** John Bianco,Dimitrios N. Kanakis,Cesare Zoia,Archya Dasgupta,Majaz
 Moonis,2025-06-12 In the last few years an impressive development has been achieved in the arena of new diagnostic and
 therapeutic approaches for brain tumors both in children and adults This has in turn led to the recognition of new tumour
 entities as well as to better categorization of the existing ones The recent WHO classification of the CNS tumors 2021 has
 been entirely revised and the term integrated diagnosis has been since then applied which refers to a combination of the
 classical histopathological diagnosis with the accompanying molecular results of some of the most common tumors In
 addition a lot of progress has been made in the field of imaging with the invention of more accurate methods and the
 improvement of previously established diagnostic modalities As a result of the aforementioned achievements in the diagnosis
 of brain tumors new treatment options have been introduced which respond more successfully to the handling of the several

tumor entities Due to the immense progress not only in the field of diagnosis but also in the treatment of brain tumors it is of utmost importance to present the newly identified biomarkers and innovative techniques which allow on the one hand a more accurate diagnosis and on the other hand a more precise therapeutic intervention Since a lot of research is conducted at present with this regard the result of these investigations should be shared with the broader research community in order to improve thereafter both the available diagnostic methods in the fields of histopathology and imaging and the therapeutic techniques in the areas of neurosurgery and chemo radiotherapy Undoubtfully this will contribute substantially in the accomplishment of the target of personalized medicine in the public The current Research Topic aims to bring together new discoveries in the diagnosis and therapy of pediatric and adult brain tumors In this context there is an open invitation to all the researchers and clinicians who are involved in this area to participate actively by contributing their valuable results and experiences with research focused on primary brain tumors Moving towards our actual goal as medical society which is not other than the implementation of personalized medicine our actual topic could be of particular value in the accomplishment of some of its fundamentals namely i precise diagnosis ii personalized intervention iii patient s participation iv prediction and prevention of the disease and v supportive care neurorehabilitation Manuscripts that are primarily in silico bioinformatics based including prognostic algorithms using large databases and do not have sufficient validation in an independent cohort of patients from one or more institutions rather than using another database and or functional validation in at least two acceptable tumor cell lines in vitro in vivo will not be considered
