## **Recent Advances In Virus Diagnosis:**

Recent Advances in Virus Diagnosis M.S. McNulty, J.B. McFerran, 2012-12-06 The traditional approach to diagnosis of virus infections by isolation of the causative virus is usually both slow and expensive. More recently the emphasis has been on the direct detection of viruses or viral antigens in clinical specimens. This can be done using established techniques such as immunofluorescence or electron microscopy or by newly developed biochemical methods. The purpose of this meeting was to review these and other developments in the laboratory diagnosis of virus infections. We would like to thank all those who contributed to the success of this meeting. In particular we are grateful to the CEC for financial sponsorship to Professor C Dow, Director of the Veterinary Research Laboratories for help in organising the meeting and to Miss B Hamilton for her excellent typing of the manuscripts.

**Recent Advances in the Diagnosis and Management of Plant Diseases** L.P. Awasthi, 2015-11-19 This book is a compilation of the most challenging and significant chapters on the diagnosis and management of important bacterial, fungal, viral, viroid, phytoplasma, non-parasitic diseases and various physiological disorders in various crops. The chapters have been contributed by eminent plant pathologists having wide experience of teaching and research on various crops with different types of diseases which cause great economic losses. The book would be very useful for students, teachers and researchers of plant pathology. This book highlights recent advances made in the development of new types of resistance in host plants and alternative strategies for managing plant diseases to improve food quality and reduce the negative public health impact associated with plant diseases. Having entered into 21st century, advancements in the diagnosis of plant pathogens and plant disease management need to be closely examined and adequately applied so that newer challenges facing plant pathology could be adequately addressed in attaining food security for the growing population. Substantial advancements have been made in terms of expanding knowledge base of the biology of plant-microbial interactions, disease management strategies and application and practice of plant pathology. Application of molecular biology in plant pathology has greatly improved our ability to detect plant pathogens and in increasing our understanding of their ecology and epidemiology. Similarly, new technologies and resources have been evolved for the development of sustainable crop protection systems by different control strategies against various pests and pathogens that

are important components of the integrated pest management programme Natural products and chemical compounds discovered as a result of basic research and molecular mechanisms of pathogenesis have led to the development of biorational pesticides Biological control has been found to be the most significant approach to plant health management during the twentieth century and promises using modern biotechnology to be even more significant in the twenty first century

New Advances in Crop Disease Management Sangita Sahni,Ganesh Thapa,Bishun Deo Prasad,2024-11-08 Crop protection is becoming increasingly important due to the need for food security and to meet growing environmental challenges This new book New Advances in Crop Disease Management provides readers with an updated and comprehensive overview of diverse crop protection strategies with special emphasis on the recent advances in crop protection approaches fundamental concepts principles methodology relationships and benefits for crop protection and human health It covers a variety of disciplines such as plant pathology biochemistry cell and molecular biology plant physiology host pathogen interactions precision agriculture decision analysis disease risk new ways of exploiting host genetic diversity including host resistance deployment biological control and microbial interactions surveillance and detection technologies and the consequences of climate change and signaling The book contains twenty chapters and begins with the role of biotechnology and its implications in crop disease detection and protection It then discusses the plant response to pathogen attack molecular basis of host pathogen interaction and induction of defense response viz R gene phytoalexins etc and advancement in early detection methodologies It also delves into induced mutation as new technology for resistant crop development The last part details the recent approaches and applications of resistant crop lines development including resistant pulses development approaches mining and mapping of R genes gene pyramiding lactic acid bacteria as biocontrol agents effecteromics and nanotechnology in crop disease management and the applications of phytochemicals and CRISPR Cas in the development of disease resistant crops for future New Advances in Crop Disease Management will be a key reference in the field of crop science and plant pathology agriculture for faculty and industry professionals as well as a valuable textbook reference for undergraduate and graduate students
