Recent Progress in Electron Microscopy of Cells and Tissues Eichi Yamada,1976 *Ultrastructure of Endocrine Cells and Tissues* P. Motta,2012-12-06 Innovative microscopic techniques introduced during the last two decades have contributed much to creating a new picture of the dynamic architecture of the cell which can now be more exactly correlated with specific biochemical and physiopathological events These developments have led to significant advances in our understanding of the physiomorphological and pathological aspects of the secretory mechanism as well as the pharmacologic methods used to control experimentally the function of exocrine and endocrine glands The integration of new ultrastructural methods such as freeze fracture etching immunocytochemistry scanning and high voltage electron microscopy cytoautoradiography etc has proven to be of great value when applied to the study of endocrine cells and tissues Because information on this topic has appeared in a variety of scientific and medical journals this book 1 reviews the results of an integrative approach presenting a comprehensive ultrastructural account of the main aspects of the field 2 points out gaps or controversial topics in our knowledge and 3 outlines pertinent directions for future research The chapters prepared by recognized authorities in the field present traditional information on the topic in a concise manner and with a valuable selection of original illustrations show what the integration of new microscopic methods can contribute to the subject in terms of new concepts This volume will be useful to cell biologists anatomists embryologists histologists pharmacologists pathologists and of course endocrinologists It will also be of interest to students practitioners of medicine and to all others dealing with clinical research and diagnosis *Acta Histochemica Et Cytochemica* ,1992 細胞の超微細構造: 細胞, 細胞, 1978 細胞の超微細構造 (Japan),1978 **Cell-Atlas - Visual Biology in Oral Medicine** Reinhard Gruber,Bernd Stadlinger,2022-03-30 The deepest understanding of the cells of the oral system will be found in decoding their communication and seeing how it is regulated Once we have understood their language clinicians might be able to talk to cells and control their action This book by 47 world renowned experts for each chapter at least one clinician and one basic scientist highlights a reliable and actual state of research regarding this topic that quickly moves forward Beyond the classic cell types addressed in the first part of the book organ systems or model systems of cell to cell communication of a more generic type are presented in four additional chapters in the second part A special feature are the colored scanning electron microscopic SEM images created to eloquently illustrate and explain the function of the depicted cell types This book accompanied by an augmented reality AR app that allows you to experience the process of bone resorption virtually should help to open the vision of how we can regenerate tissues and heal diseases by controlling the language of the cells and shows us the direction in which research and therapy will go in the future **Department of Housing and Urban Development-independent Agencies Appropriations for 1976: National Science Foundation** United States.
