Receptors In The Human Nervous System:

Receptors in the Human Nervous System F. A. O. Mendelsohn, George Paxinos, 2013-10-22 Receptors in the Human Nervous System is a synthesis of the results of receptor mapping by leaders in the field In addition to a comprehensive discussion of the distribution and possible interactions of the receptors of different neuroactive substances this book also contains an abundance of pictorial representations of receptor distributions High quality photographs of one receptor are often juxtaposed with photographs of the distribution of a different receptor or receptor subtype for the consideration of possible interactions between different systems The book surveys the distribution of receptor subtypes for the classical monoamine transmitters acetylcholine adrenaline noradrenaline and serotonin as well as the distribution of receptors for the excitatory and inhibitory amino acids glutamate GABA and benzodiazepines as well as the opioid peptides angiotensin and other neuropeptides The distribution of multiple types of serotonin receptors is given in detail and the codistribution of receptors in the cortex is discussed The book is directed toward researchers in the field of chemical neuroanatomy as well as pharmacologists neurophysiologists and neuroscientists *The Human Nervous System* Charles R. Noback, David A. Ruggiero, Norman L. Strominger, Robert J. Demarest, 2005 In this work the authors integrate three major basic themes of neuroscience to serve as an introduction and review of the subject *The Human Nervous System* Juergen K Mai, George Paxinos, 2011-12-13 The previous two editions of the Human Nervous System have been the standard reference for the anatomy of the central and peripheral nervous system of the human The work has attracted nearly 2 000 citations demonstrating that it has a major influence in the field of neuroscience The 3e is a complete and updated revision with new chapters covering genes and anatomy gene expression studies and glia cells The book continues to be an excellent companion to the Atlas of the Human Brain and a common nomenclature throughout the book is enforced Physiological data functional concepts and correlates to the neuroanatomy of the major model systems rat and mouse as well as brain function round out the new edition Adopts standard nomenclature following the new scheme by Paxinos Watson and Puelles and aligned with the Mai et al Atlas of the Human Brain new edition in 2007 Full color throughout with many new and significantly enhanced illustrations Provides essential reference information for users in conjunction with brain atlases for the identification of brain structures the connectivity between different areas and to evaluate data collected in anatomical physiological pharmacological behavioral and imaging studies **The Human Nervous System** Charles Robert Noback, 1981 Life as a Whole John William Bews, 1937 The Human Nervous System Murray Llewellyn Barr, 1974 **Neuroreceptors** Ferdinand Hucho, 1982 No detailed description available for Neuroreceptors *Receptor Autoradiography* Dr. John Wharton, Julia M. receptor autoradiography more accessible by giving a detailed account of the methodology and its application in the analysis of receptors in the brain and peripheral organs These examples are not exhaustive but illustrate the versatility of the technique as well as its potential pitfalls The book provides an introduction to the receptor concept and gives detailed information on the theory and procedures involved in the autoradiographic localization and quantification of radiolabelled ligand binding sites This volume will be an essential tool for neuroscientists pharmacologists histochemists neuropathologists researchers in the pharmaceutical industry and students of the biological sciences **Research Awards Index** ,1984
