Receptors For Extracellular Matrix:

Receptors For Extracellular Matrix John McDonald, 2012-12-02 Receptors for Extracellular Matrix covers the major receptor families and their potential biological functions. Composed of eight chapters, the book first discusses the structure and function of membrane-associated proteoglycans, focusing on two classes of integral membrane molecules, syndecan and CD44. It then examines the important area of mechanisms of signal transduction from integrin receptors that must mediate the effects of extracellular matrices and other ligands on cell behavior. Multidomain proteins of the extracellular matrix and their role in controlling cellular growth are also considered. This book also discusses the significant research developments in NCAM, the most abundant and widespread of the known vertebrate cell-cell adhesion molecules. The discussion particularly emphasizes the role of posttranslational glycosylation with polysialic acid in the function of the NCAM molecule that undergoes unusual and highly characteristic differences in glycosylation during development. Other chapters deal with the regulation of neural development by the extracellular matrix and the molecular basis of cell adhesion. This book includes discussions on the interaction of adhesion receptors with well characterized cellular recognition sites and extracellular ligands and cell migration occurring during embryogenesis, gastrulation, neural crest cell migration, neurite extension, lymphocyte migration, and wound healing. The concluding chapters address the wide array of integrin associations, their physiologic relevance, and structural aspects, as well as the anchorin CII, a collagen-binding protein of the calpactin-lipocortin family. This book is of great value to cell biologists and researchers.

Reginald M. Gorczynski, 1986 Cumulated Index Medicus, 1998 **Integrins** David A. Cheresh, Robert P. Mecham, 1994-09-26 Integrins: Molecular and Biological Responses to the Extracellular Matrix will help basic, applied, and clinical researchers keep up with the explosion of literature on the integrin family of proteins. This volume extends material previously covered in Receptors for Extracellular Matrix. It addresses some of the most exciting areas of integrin biology, including the varied roles of integrins in cell division, differentiation, movement, wound healing, inflammation, thrombosis, osteoporosis, and cancer. Describes key aspects of integrin structure, function, and biology. Covers collagen receptors, epithelial cell integrins, leukocyte integrins, platelet integrins, integrin signaling, and integrin antagonists. Investigates the expression and role of integrins during development and in the cytoskeleton. Includes the actions and influences of integrins in inflammation, thrombosis, and osteoporosis.
