Recent Advances in Mechanics of Solids and Structures--2003 Young W. Kwon,Howard Chung,2003

Uncertainty Assessment of Large Finite Element Systems Christian A. Schenk,Gerhart I. Schuëller,2005-06-08 The treatment of uncertainties in the analysis of engineering structures remains one of the premium challenges in modern structural mechanics It is only in recent years that the developments in stochastic and deterministic computational mechanics began to be synchronized To foster these developments novel computational procedures for the uncertainty assessment of large finite element systems are presented in this monograph The stochastic input is modeled by the so called Karhunen Lo ve expansion which is formulated in this context both for scalar and vector stochastic processes as well as for random fields Particularly for strongly non linear structures and systems the direct Monte Carlo simulation technique has proven to be most advantageous as method of solution The capabilities of the developed procedures are demonstrated by showing some practical applications

Recent Advances in Solids and Structures ,2005 [Dramatic Effect of Cross-Correlations in Random Vibrations of Discrete Systems, Beams, Plates, and Shells](#) Isaac Elishakoff,2020-04-11 This volume explains the dramatic effect of cross correlations in forming the structural response of aircraft in turbulent excitation ships in rough seas cars on irregular roads and other dynamic regimes It brings into sharp focus the dramatic effect of cross correlations often neglected due to the analytical difficulty of their evaluation Veteran author Professor Isaac Elishakoff illustrates how neglect of cross correlations could result in underestimation of the response by tens or hundreds of percentages the effect of the random vibrations of structures main elements including beams plates and shells [Index of Conference Proceedings](#) British Library.
