Anticancer plants: Properties and Application Mohd Sayeed Akhtar, Mallappa Kumara Swamy, 2018-06-29 Cancer is one of the leading death cause of human population increasingly seen in recent times Plants have been used for medicinal purposes since immemorial times Though several synthetic medicines are useful in treating cancer they are inefficient and unsafe However plants have proved to be useful in cancer cure Moreover natural compounds from plants and their derivatives are safe and effective in treatment and management of several cancer types The anticancer plants such as Catharanthus roseus Podophyllum peltatum Taxus brevifolia Camptotheca acuminata Andrographis paniculata Crateva nurvala Croton tonkinensis Oplopanax horridus etc are important source of chemotherapeutic compounds These plants have proven their significance in the treatment of cancer and various other infectious diseases Nowadays several well known anticancer compounds such as taxol podophyllotoxins camptothecin vinblastine vincristine homoharringtonine etc have been isolated and purified from these medicinal plants Many of them are used effectively to combat cancer and other related diseases The herbal medicine and their products are the most suitable and safe to be used as an alternative medicine Based on their traditional uses and experimental evidences the anticancer products or compounds are isolated or extracted from the medicinally important plants Many of these anticancer plants have become endangered due to ruthless harvesting in nature Hence there is a need to conserve these species and to propagate them in large scale using plant tissue culture Alternatively plant cell tissue and organ culture biotechnology can be adopted to produce these

anticancer compounds without cultivation The proper knowledge and exploration of these isolated molecules or products could provide an alternative source to reduce cancer risk anti tumorigenic properties and suppression of carcinogen activities Anticancer plants Volume 1 Properties and Application is a very timely effort in this direction Discussing the various types of anticancer plants as a source of curative agent their pharmacological and nutraceutical properties cryo preservations and recent trends to understand the basic cause and consequences involved in the diseases diagnosis We acknowledge the publisher Springer for their continuous inspiration and valuable suggestions to improvise the content of this book We further extend our heartfelt gratitude to all our book contributors for their support and assistance to complete this assignment I am sure that these books will benefit the scientific communities including academics pharmaceuticals nutraceuticals and medical practitioners
