Reading Comprehension This Week Returns:

A Return to the Common Reader Adeline Buckland, 2017-03-02 In 1957 Richard Altick's groundbreaking work *The English Common Reader* transformed the study of book history. Putting readers at the centre of literary culture, Altick anticipated and helped produce fifty years of scholarly inquiry into the ways and means by which the Victorians read. Now *A Return to the Common Reader* asks what Altick's concept of the common reader actually means in the wake of a half century of research. Digging deep into unusual and eclectic archives and hitherto overlooked sources, its authors give new understanding to the masses of newly literate readers who picked up books in the Victorian period. They find readers in prisons, in the barracks, and around the world, and they remind us of the power of those forgotten readers to find forbidden texts, shape new markets, and drive the production of new reading material across a century. Inspired and informed by Altick's seminal work, *A Return to the Common Reader* is a cutting-edge collection which dramatically reconfigures our understanding of the ordinary Victorian readers whose efforts and choices changed our literary culture forever. **Weekly**

Registrar-general, 1861 Railway Times, 1850 *Foreign Returns* Great Britain. Royal Commission on Elementary Education Acts, 1888 *Patient-Centered Design of Cognitive Assistive Technology for Traumatic Brain Injury Telerehabilitation* Elliot Cole, 2013-03-01 Computer software has been productive in helping individuals with cognitive disabilities. Personalizing the user interface is an important strategy in designing software for these users because of the barriers created by conventional user interfaces for the cognitively disabled. Cognitive assistive technology (CAT) has typically been used to provide help with everyday activities outside of cognitive rehabilitation therapy. This book describes a quarter century of computing R D at the Institute for Cognitive Prosthetics, focusing on the needs of individuals with cognitive disabilities from brain injury. Models and methods from Human Computer Interaction (HCI) have been particularly valuable initially in illuminating those needs. Subsequently, HCI methods have expanded CAT to be powerful rehabilitation therapy tools, restoring some damaged cognitive abilities which have resisted conventional therapy. Patient-Centered Design (PCD) emerged as a design methodology which incorporates both clinical and technical factors. PCD also takes advantage of the patient's ability to redesign and refine the user interface and to achieve a very good fit between user and system. Cognitive Prosthetics Telerehabilitation is a powerful therapy modality. Essential characteristics are delivering service to patients in their own home, having the patient's priority activities be the focus of therapy, using cognitive prosthetic software which applies Patient-Centered Design, and videoconferencing with a workspace shared between therapist and patient. Cognitive Prosthetics Telerehabilitation has a rich set of advantages for the many stakeholders involved with brain injury rehabilitation.
