Resistance' 91: Achievements and Developments in Combating Pesticide Resistance I. Denholm, A. Devonshire, D. Hollomon, 1992-07-31 The development of pesticide resistance in arthropod pests plant pathogens and weeds can be viewed and studied from two contrasting perspectives At a fundamental level resistance provides an almost ideal example of adaptation to withstand severe environmental stress Population geneticists biochemists and most recently molecular biologists have cast considerable light on the nature of this adaptation in diverse taxonomic groups and on factors determining its selection and spread within and between populations Unlike most evolutionary phenomena however resistance is also of immediate practical and economic significance Not only has the number of resistant species continued to increase inexorably but there has been an alarming increase in the severity and extent of some resistance problems Cases of organisms resisting virtually all available pesticides are by no means uncommon and pose a formidable challenge in view of present difficulties in discovering and developing novel chemicals Although most occurrences of resistance were initially monofactorial resistance now frequently involves a suite of coexisting mechanisms that protect organisms against the same or different pesticide groups and may even predispose them to resist new as yet unused chemicals

The Economics of Managing Biotechnologies T.M. Swanson, 2006-04-11 The advent of new biotechnologies implies significant changes in the world both biologically and industrially Biologically these new technologies represent changes on a scale never before witnessed in the context of evolutionary systems How these systems will respond to these changes is uncertain and potentially very significant The first part of this volume addresses these issues in a series of chapters considering the manner in which societies might analyse and manage these systemic responses to biotechnological changes The second part of the volume addresses the industrial issues concerning biotechnologies One of the primary motivations for these changes is to enhance the appropriability of the value of innovation occurring within the life sciences sectors Changing to a property rights based system of biotechnology has implications for the nature of research and development within these sectors and the diffusion and distribution of its benefits across the globe Another set of chapters in this volume sets out a framework for considering these important industrial issues The volume is the outcome of a two year project on the economics of managing

biotechnologies in agriculture It is recommended to academics and policy makers interested in the issues concerning society's options in the management of this process of technological change Encyclopedia of Pest Management, Volume II David Pimentel, Ph.D., 2007-07-17 With contributions from more than 200 esteemed international authorities and containing approximately 200 entries the Encyclopedia of Pest Management Volume II is a key reference for professionals in academia industry and government as well as students at all levels Containing completely new entries this volume is designed to be regularly co
