Placenta as a Model and a Source Olga Genbacev,Arnold Klover,Rebecca Beaconsfield,2012-12-06 The foreword to the book of a meeting is often an excuse for a paen of praise a homily or even an apologia and sometimes a combination of all three While certain traditions have been dispensed with in this volume the standard pattern for the foreword has its advantages so here at least tradition will be adhered to though in reverse order from that stated above It The apologia can be dismissed briefly for the editors have explained in their General Introduction that this is not the book of a meeting All that remains to be added here is a description of the modus operandi Being aware that speaking and writing are different activities requiring different presentation each participant was asked to prepare a script for publication resembling what he would speak about only in outline It may be that as a result the essays lack detail and are thin under some of the classical headings of scientific writing So the reader in turn is asked to accept this and give his attention instead to the concepts and ideas contained therein It may even come about that this kind of presentation will in the end result in something less ephemeral than the standard conference proceedings book Criticism of conference proceedings and the type of meetings that give rise to these little loved tomes is not a new phenomenon Respiratory Gas Exchange and Blood Flow in the Placenta Lawrence D. Imaging and Augmented Reality Takeyoshi Dohi, Ichiro Sakuma, Hongen Liao, 2008-07-15 The 4th International Workshop on Medical Imaging and Augmented Reality MIAR 2008 was held at the University of Tokyo Tokyo Japan during August 1-2, 2008. The goal of MIAR 2008 was to bring together researchers in medical imaging and intervention to present state-of-the-art developments in this ever-growing research area. Rapid technical advances in medical imaging including its growing application in drug gene therapy and invasive interventional procedures have attracted significant interest in the close integration of research in the life sciences, medicine, physical sciences, and engineering. Current research is also motivated by the fact that medical imaging is moving increasingly from a primarily diagnostic modality towards a therapeutic and interventional aid driven by the streamlining of diagnostic and therapeutic processes for human diseases by means of imaging modalities and robotic assisted surgery. The impact of MIAR on these fields increases each year and the quality of submitted papers this year was very impressive. We received 90 full submissions which were subsequently reviewed by up to five reviewers. Reviewer allegations were carefully checked against author allegations to avoid conflicts of interest and the review process was run as a double-blind process. A special procedure was also devised for papers from the universities of the organizers upholding a double-blind review process for these papers. The MIAR 2008 Program Committee finally accepted 44 full papers. For this workshop, we also included three papers from the invited speakers covering registration and segmentation, virtual reality and perceptual docking for robotic control.
