

**Problem:** Reduce  $\frac{9}{24}$  to it's lowest term.

**Solution:**

The factors of numerators are 1,3,9. And the factors of the denominators are 1,2,3,4,6,8,12,24.

So, the common greater factors between the two numbers are 3.

Now, divide the numerator and denominator by 3.

$$\text{So, } \frac{9}{24} \div \frac{3}{3} = \frac{3}{8}$$

The reduced form of the given fraction is  $\frac{3}{8}$ .

Reduced to Lowest Terms M. Nathan Freeda, 2004-07 *Reduced to Lowest Terms* presents some of the most original thinking and analysis of the new century A M Nathan Freeda examines contemporary society and its ills concluding that our collective obsession with numbers has made quantity a far more important issue than quality Freeda adeptly describes the problems we face pairing each with a set of concrete solutions that will enable us to lose our addiction to numbers and achieve lives of richness and merit No institution within our society is spared from examination A His humorous observations and personal reflections make this book a decidedly different work of social commentary A Join M Nathan Freeda as he takes a long hard look where we are and where we might be going Embark upon an unprecedented opportunity to reorient our society into one that cares more about how good life can be and less about the illusion of safety in numbers     The Formation of the Classical Tafsīr Tradition Walid A.
