Reductive Logic And Proof Search Proof Theory Semantics And Control:

Reductive Logic and Proof-search David J. Pym, Eike Ritter, 2004 Discusses the development of the mathematical and computational metatheory of reductive logic and proof search including proof theoretic semantic model theoretic and algorithmic aspects The scope ranges from the conceptual background to reductive logic through its mathematical metatheory to its applications in the computational sciences Logic Programming Maria Garcia Banda, Enrico Pontelli, 2008-12-15 This book constitutes the refereed proceedings of the 24th International Conference on Logic Programming ICLP 2008 held in Udine Italy in December 2008 The 35 revised full papers together with 2 invited talks 2 invited tutorials 11 papers of the co located first Workshop on Answer Set Programming and Other Computing Paradigms ASPOCP 2008 as well as 26 poster presentations and the abstracts of 11 doctoral consortium articles were carefully reviewed and selected from 177 initial submissions The papers cover all issues of current research in logic programming they are organized in topical sections on applications algorithms systems and implementations semantics and foundations analysis and transformations CHRs and extensions implementations and systems answer set programming and extensions as well as constraints and optimizations **Bolzano's Logical System** Ettore Casari, 2016 A unique new book exploring Bernard Bolzano's Wissenschaftslehre Theory of Science and introducing a formal system to examine the logic presented in Bolzano's work **Fragments of First-Order Logic** Ian Pratt-Hartmann, 2023 Pratt Hartmann considers for which fragments of first order logic there is an effective method for determining satisfiability or finite satisfiability Furthermore he asks if these problems are decidable for some fragment what is their computational complexity **Samson Abramsky on Logic and Structure in Computer Science and Beyond** Alessandra Palmigiano, Mehrnoosh Sadrzadeh, 2023-08-01 Samson Abramsky's wide ranging contributions to logical and structural aspects of Computer Science have had a major influence on the field This book is a rich collection of papers inspired by and extending Abramsky's work It contains both survey material and new results organised around six major themes domains and duality game semantics contextuality and quantum computation comonads and descriptive complexity categorical and logical semantics and probabilistic computation These relate to different stages and aspects of Abramsky's work reflecting its exceptionally broad scope and his ability to illuminate and unify diverse topics Chapters in the volume include a review of his entire body of work spanning from philosophical aspects to logic programming language theory quantum theory economics and psychology and relating it to a theory of unification of sciences using dual adjunctions The section on game semantics shows how Abramsky's work has led to a powerful new paradigm for the semantics of computation The work on contextuality and categorical quantum mechanics has been highly influential and provides the foundation for increasingly widely used methods in quantum computing The work on comonads and descriptive complexity is building bridges between currently disjoint research areas in computer science relating Structure to Power The volume also includes a scientific autobiography and an overview of the contributions The outstanding

set of contributors to this volume including both senior and early career academics serve as testament to Samson Abramsky's enduring influence. It will provide an invaluable and unique resource for both students and established researchers. **The Bulletin of Symbolic Logic**, 2006 *Book Review Index Cumulation* Dana Ferguson, 2005-09 Book Review Index provides quick access to reviews of books, periodicals, books on tape and electronic media representing a wide range of popular academic and professional interests. The Semantics and Proof Theory of the Logic of Bunched Implications David J. Pym, 2013-04-17 This is a monograph about logic. Specifically, it presents the mathematical theory of the logic of bunched implications. I consider BLI's proof theory, model theory and computation theory. However, the monograph is also about informatics in a sense which I explain. Specifically, it is about mathematical models of resources and logics for reasoning about resources. I begin with an introduction which presents my background view of logic from the point of view of informatics, paying particular attention to three logical topics which have arisen from the development of logic within informatics: Resources as a basis for semantics, Proof search as a basis for reasoning and The theory of representation of object logics in a meta logic. The ensuing development represents a logical theory which draws upon the mathematical, philosophical and computational aspects of logic. Part I presents the logical theory of propositional BLI together with a computational interpretation. Part II presents a corresponding development for predicate BLI. In both parts I develop proof model and type theoretic analyses. I also provide semantically motivated computational perspectives so beginning a mathematical theory of resources. I have not included any analysis beyond conjecture of properties such as decidability, finite models, games or complexity. I prefer to leave these matters to other occasions, perhaps in broader contexts.

Interpolation and Definability Dov M. Gabbay, Larisa Maksimova, 2005-05-12 This book is a specialized monograph on interpolation and definability, a notion central in pure logic and with significant meaning and applicability in all areas where logic is applied, especially computer science, artificial intelligence, logic programming, philosophy of science and natural language.
