Geometric Nonlinear Functional Analysis Yoav Benyamini,Joram Lindenstrauss,1998 This book presents a systematic and unified study of geometric nonlinear functional analysis This area has its classical roots in the beginning of the twentieth century and is now a very active research area having close connections to geometric measure theory probability classical analysis combinatorics and Banach space theory The main theme of the book is the study of uniformly continuous and Lipschitz functions between Banach spaces e g differentiability stability approximation existence of extensions fixed points etc This study leads naturally also to the classification of Banach spaces and of their important subsets mainly spheres in the uniform and Lipschitz categories Many recent rather deep theorems and delicate examples are included with complete and detailed proofs Challenging open problems are described and explained and promising new research directions are indicated

Geometry and Probability in Banach Spaces L. Schwartz,P.R. Chernoff,1981-04 **Fixed Point Theory** Andrzej

Granas,James Dugundji,2013-03-09 The aim of this monograph is to give a unified account of the classical topics in fixed point theory that lie on the border line of topology and non linear functional analysis emphasizing developments related to the Leray Schauder theory Using for the most part geometric methods our study centers around formulating those general principles of the theory that provide the foundation for many of the modern results in diverse areas of mathematics The main text is self contained for readers with a modest knowledge of topology and functional analysis the necessary background material is collected in an appendix or developed as needed Only the last chapter presupposes some familiarity with more advanced parts of algebraic topology The Miscellaneous Results and Examples given in the form of exercises form an integral part of the book and describe further applications and extensions of the theory Most of these additional results can be established by the methods developed in the book and no proof in the main text relies on any of them more demanding problems are marked by an asterisk The Notes and Comments at the end of paragraphs contain references to the literature and give some further information about the results in the text Nonstandard Methods in Stochastic Analysis and

mathematical physics A welcome addition Bulletin of the American Mathematical Society 1986 edition Biorthogonal Systems in Banach Spaces Petr Hajek, 2008 This book introduces the reader to some of the basic concepts results and applications of biorthogonal systems in infinite dimensional geometry of Banach spaces and in topology and nonlinear analysis in Banach spaces It achieves this in a manner accessible to graduate students and researchers who have a foundation in Banach space theory The authors have included numerous exercises as well as open problems that point to possible directions of research Smoothness and Renormings in Banach Spaces Robert Deville, Gilles Godefroy, Vaclav Zizler, 1993 The purpose of this book is to provide the reader with a self contained treatment of the basic techniques of construction of equivalent norms on Banach spaces which enjoy special properties of convexity and smoothness We also show how the existence of such norms relates to the structure of the space and provide applications in various directions
