The Accelerating Transport Innovation Revolution George Giannopoulos, John F. Munro, 2019-04-17 The Accelerating Transport Innovation Revolution A Global Case Study based Assessment of Current Experience Cross sectorial Effects and Socioeconomic Transformations offers a comprehensive view of current state of the art and practices around the world to create innovation on a revolutionary scale and connect research to commercial exploitation of its results It offers a fascinating new model of the innovation process based on theories of biological ecosystems general systems theory and basins of attraction represented through space time graphs well known in mathematics Furthermore it considers through a number of dedicated chapters key issues and elements of innovation ecosystems such as Causal Factors and system constraints affecting the development and sustainability of innovation ecosystems Chapter 4 Review of innovation organization and governance in key countries and regions Chapter 5 the role of technological Spillovers Chapter 6 Collection and use of data for innovation monitoring and benchmarking Chapter 7 Intellectual Property protection between competing ecosystems Chapter 8 Economics of innovation Chapter 9 Public and private sector involvement in Transport innovation creation Chapter 10 the role of the individual entrepreneur innovator in energizing change Chapter 11 Finally in Chapter 12 there is a thorough summary of key findings This book uses a paradigmatic approach to augment the innovation ecosystem model of innovation that integrates beliefs and learning into the innovation ecosystems model It therefore includes ten case studies from the U S Europe and Asia detailing how innovation is created across continents and different ecosystems and what are the critical lessons to be learned It does this effectively at five different levels of analysis i.e. the individual innovator entrepreneur level the organization level government agency or company the regional ecosystem level the nation state level and the global systemic or international level Each level of analysis reveals unique features of the innovation landscape and the ten case studies allow the reader to assess when and where specific enablers are facilitating innovation especially on a revolutionary scale The need for the book came from the realization that despite the billions of dollars spent on various research programs over the past 20 years especially in the public sector there have been few clear and tangible efforts directed at exploring how innovation production increasingly occurs and the critical factors necessary to sustain large scale revolutionary change as the future unfolds Thus a primary theme of the book is that understanding how research results translate into market innovation and implementation especially understanding the nature of revolutionary innovation is as important as the creation of innovations themselves While the focus of the book is on Transportation the concepts and recommendations presented apply to other fields too
