Practical Modeling Of Urban Water Systems Monograph 11:

GIS Applications for Water, Wastewater, and Stormwater Systems U.M. Shamsi, 2005-01-27 Professionals involved in the planning design operation and construction of water wastewater and stormwater systems need to understand the productivity enhancing applications of GIS Inspired by an ASCE sponsored continuing education course taught by the author GIS Applications for Water Wastewater and Stormwater Systems focuses on t *Porous Pavements* Bruce Ferguson, 2005-02-18 Pavements are the most ubiquitous of all man made structures and they have an enormous impact on environmental quality They are responsible for hydrocarbon pollutants excess runoff groundwater decline and the resulting local water shortages temperature increases in the urban heat island and for the ability of trees to extend their roots in order to live Porous pavements despite their ability to mitigate these factors remain the object of much skepticism and controversy Written by a renowned expert with 25 years of experience in urban watershed management Porous Pavements is the first comprehensive encyclopedia of porous pavement materials The book begins with five chapters that lay a foundation for all porous pavement materials and applications introducing the types of materials and arrangements their roles in the urban environment and the principles of pavement structure hydrology and rooting space The following nine chapters outline the costs maintenance requirements advantages and disadvantages for different applications installation methods sources of standard specifications and performance levels for each family of porous pavement materials Relying on case studies and factual data from observed experience and containing abundant references for further information Porous Pavements gives responsible practitioners a complete toolbox from which to select the appropriate material for site specific conditions providing a green alternative to impervious pavements *Distributed Hydrologic Modeling Using GIS* Baxter E. Vieux, 2016-08-19 This book presents a unified approach for modeling hydrologic processes distributed in space and time using geographic information systems GIS This Third Edition focuses on the principles of implementing a distributed model using geospatial data to simulate hydrologic processes in urban rural and peri urban watersheds The author describes fully distributed representations of hydrologic processes where physics is the basis for modeling and geospatial data forms the cornerstone of parameter and process representation A physics based approach involves conservation laws that govern the movement of water ranging from precipitation over a river basin to flow in a river Global geospatial data have become readily available in GIS format and a modeling approach that can utilize this data for hydrology offers numerous possibilities GIS data formats spatial interpolation and resolution have important effects on the hydrologic simulation of the major hydrologic components of a watershed and the book provides examples illustrating how to represent a watershed with spatially distributed data along with the many pitfalls inherent in such an undertaking Since the First and Second Editions software development and applications have created a richer set of examples and a deeper understanding of how to perform distributed hydrologic analysis and prediction This Third Edition describes the development of geospatial data for use in Vflo
