Revolution In Science:

Revolution in Science I. Bernard Cohen, 1985 Cohen's exploration seeks to uncover nothing less than the nature of all scientific revolutions the stages by which they occur their time scale specific criteria for determining whether or not there has been a revolution and the creative factors in producing a revolutionary new idea *The Invention of Science* David Wootton, 2015-09-17 We live in a world made by science How and when did this happen This book tells the story of the extraordinary intellectual and cultural revolution that gave birth to modern science and mounts a major challenge to the prevailing orthodoxy of its history Before 1492 it was assumed that all significant knowledge was already available there was no concept of progress people looked for understanding to the past not the future This book argues that the discovery of America demonstrated that new knowledge was possible indeed it introduced the very concept of discovery and opened the way to the invention of science The first crucial discovery was Tycho Brahe's nova of 1572 proof that there could be change in the heavens The telescope 1610 rendered the old astronomy obsolete Torricelli's experiment with the vacuum 1643 led directly to the triumph of the experimental method in the Royal Society of Boyle and Newton By 1750 Newtonianism was being celebrated throughout Europe The new science did not consist simply of new discoveries or new methods It relied on a new understanding of what knowledge might be and with this came a new language discovery progress facts experiments hypotheses theories laws of nature almost all these terms existed before 1492 but their meanings were radically transformed so they became tools with which to think scientifically We all now speak this language of science which was invented during the Scientific Revolution The new culture had its martyrs Bruno Galileo its heroes Kepler Boyle its propagandists Voltaire Diderot and its patient labourers Gilbert Hooke It led to a new rationalism killing off alchemy astrology and belief in witchcraft It led to the invention of the steam engine and to the first Industrial Revolution David Wootton's landmark book changes our understanding of how this great transformation came about and of what science is **The Scientific Revolution, 1500-1800** Alfred Rupert Hall, 1954 [The Cultural Meaning of the Scientific Revolution](#) Margaret C. Jacob, 1988 Jacob history New School for Social Research proposes that the science of the 17th and 18th centuries was eventually accepted because it was made compatible with larger political and economic interests Annotation copyright Book News Inc Portland Or *The revolution in science 1500-1750* A. Rupert Hall, 1983 **The Scientific Revolution** H. Floris Cohen, 1994-10-03 In this first book length historiographical study of the Scientific Revolution H Floris Cohen examines the body of work on the intellectual social and cultural origins of early modern science Cohen critically surveys a wide range of scholarship since the nineteenth century offering new perspectives on how the Scientific Revolution changed forever the way we understand the natural world and our place in it Cohen's discussions range from scholarly interpretations of Galileo Kepler and Newton to the question of why the Scientific Revolution took place in seventeenth century Western Europe rather than in ancient Greece China or the Islamic world Cohen contends that the emergence of early modern science was essential

Rethinking the Scientific Revolution Margaret J. Osler, 2000-03-13 This book challenges the traditional historiography of the Scientific Revolution probably the single most important unifying concept in the history of science Usually referring to the period from Copernicus to Newton roughly 1500 to 1700 the Scientific Revolution is considered to be the central episode in the history of science the historical moment at which that unique way of looking at the world that we call modern science and its attendant institutions emerged It has been taken as the terminus a quo of all that followed Starting with a dialogue between Betty Jo Teeter Dobbs and Richard S Westfall whose understanding of the Scientific Revolution differed in important ways the papers in this volume reconsider canonical figures their areas of study and the formation of disciplinary boundaries during this seminal period of European intellectual history

The Scientific Revolution Steven Shapin, 1996 Shapin claims that there was no such thing as the Scientific Revolution neither as a coherent chronological event nor as a movement in science Instead he writes about how reformed practices of making the same observations led to the creation of new ideas
