Science and Civilization Robert C. Stauffer, 1949 Science and civilization University of Wisconsin, 1968 Science and Civilisation in China: Volume 2, History of Scientific Thought Joseph Needham, 1956-01-03 The second volume of Dr Joseph Needham's great work *Science and Civilisation in China* is devoted to the history of scientific thought Beginning with ancient times it describes the Confucian milieu in which arose the organic naturalism of the great Taoist school the scientific philosophy of the Mohists and Logicians and the quantitative materialism of the Legalists Thus we are brought on to the fundamental ideas which dominated scientific thinking in the Chinese middle ages The author opens his discussion by considering the remote and pictographic origins of words fundamental in scientific discourse and then sets forth the influential doctrines of the Two Forces and the Five Elements Subsequently he writes of the important sceptical tradition the effects of Buddhist thought and the Neo Confucian climax of Chinese naturalism Last comes a discussion of the conception of Laws of Nature in China and the West *Science and Civilization* University of Wisconsin, 1949 **Science and Civilization** Francis Sydney Marvin, 1923 *Science and Civilization* Francis Sydney Marvin, 2018-01-13 Excerpt from *Science and Civilization Essays Arranged and Edited* The editor and readers of this book are under a debt to Dr Charles Singer which can hardly be overstated Those who attended the course will remember the vigour and the learning which added so greatly to its success In seeing the book through the press his generous help and good judgement have been of equal service About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works Science and Civilization Francis Sydney Marvin, 2013-04-01 This early work by Francis Sydney Marvin was originally published in 1923 and we are now republishing it with a brand new introductory biography *Science and Civilization* is a work on the history of scientific development and its affect on society Francis Sidney Marvin was born in 1863 in London son of Francis Bentham Marvin and his wife Julia Chase He was educated at Merchant Taylors School in London and went on to study classics and modern history at St John's College Oxford Marvin retained a keen interest in history throughout his life and organised many courses and lectures on the subject to promote interest in the field He wrote several notable works including *Progress and History* 1924 *The Evolution of World Peace* 1933 and *The leadership of the world* 1914 Francis Sidney Marvin died in 1943 in Barnet at the age of eighty **Science in Civilization** Theodore W. Jeffries, 1971 Primarily for community college students **Civilization and the Culture of Science** Stephen Gaukroger, 2020-02-19 How did science come to have such a central place in Western culture How did cognitive values and

subsequently moral political and social ones come to be modelled around scientific values In Civilization and the Culture of Science Stephen Gaukroger explores how these values were shaped and how they began in turn to shape those of society The core nineteenth and twentieth century development is that in which science comes to take centre stage in determining ideas of civilization displacing Christianity in this role Christianity had provided a unifying thread in the study of the world however and science had to match this which it did through the project of the unity of the sciences The standing of science came to rest or fall on this question which the book sets out to show in detail is essentially ideological not something that arose from developments within the sciences which remained pluralistic and modular A crucial ingredient in this process was a fundamental rethinking of the relations between science and ethics economics philosophy and engineering In his engaging description of this transition to a scientific modernity Gaukroger examines five of the issues which underpinned this shift in detail changes in the understanding of civilization the push to unify the sciences the rise of the idea of the limits of scientific understanding the concepts of applied and popular science and the way in which the public was shaped in a scientific image
