Signal And Sense Local And Global Order:

Die Ethologie der Hunde Raymond Coppinger, Mark Feinstein, 2018-05-14 Coppinger und Feinstein betrachten Hunde in diesem Grundlagenwerk mit dem unbestechlichen und unsentimentalen Blick der Wissenschaft und arbeiten anhand vieler Beispiele aus ihrer jahrzehntelangen Feldforschung und aus verschiedenen Perspektiven klar heraus dass Verhalten genau wie körperliche Form evolutionäre Grundlagen besitzt und von den gleichen Mechanismen geprägt wird Weit davon entfernt Hunde als unintelligente und gefühllose Wesen abzutun legen sie den Fokus ganz einfach auf wissenschaftliche Tatsachen die vor lauter verständlicher Begeisterung über den besten Freund des Menschen oft zu kurz kommen Am Ende wird klar Wer zumindest ansatzweise die Mechanismen versteht warum Hunde sich so verhalten müssen wie sie es tun und was sie sprichwörtlich ticken lässt wird sie ab sofort nicht mit geringerer sondern mit noch höherer Wertschätzung und größerem Verständnis betrachten denn nichts ist so unendlich komplex und wunderbar wie das Leben selbst Coppinger und Feinstein decken auf wie das Hundeverhalten biologische Grundlagen und Grenzen hat und wie es von Genetik Umwelt und den Folgen des Verhaltens selbst beeinflusst wird Wenn Sie wirklich mehr über das Verhalten von Tieren und insbesondere Hunden wissen möchten dann ist dies das richtige Buch für Sie Seien Sie darauf vorbereitet sich auf eine Herausforderung einzulassen aber eine Menge zu lernen Robert Bailey Tiertrainer Wenn Sie nur Zeit für ein Buch über Hundeverhalten haben dann empfehle ich dieses Dr Udo Ganslofer

Emergent Computation Stephanie Forrest, 1991 Researchers in several fields are exploring computational systems in which interesting global behavior emerges from local interactions among component parts an approach called emergent computation In these systems interactions among simultaneous computations are exploited to improve efficiency increase flexibility or provide more realistic models of natural phenomena These 31 essays define and explore the concept of emergent computation in such areas as artificial networks adaptive systems classifier systems connectionist learning other learning and biological networks to determine what properties are required of the supporting architectures that generate them Many of the essays share the themes of design how to construct such systems the importance of preexisting structure to learning and the role of parallelism and the tension between cooperative and competitive models of interaction In the introduction Stephanie Forrest presents several detailed examples of the kinds of problems emergent computation can address These include showing how emergent computation can lead to efficiency improvements in parallel processing establishing the connection between emergent computation and nonlinear systems and comparing two search techniques to show how the emergent computational approach to a problem differs from other more conventional approaches Stephanie Forrest is Assistant Professor in the Department of Computer Science at the University of New Mexico She is also affiliated with the Center for Nonlinear Studies and Computing Division at Los Alamos National Laboratory *Synopsis of Neuropsychiatry* Stuart C. Yudofsky, Robert E. Hales, 1994 A condensation and distillation of the most relevant data from almost every chapter of the American Psychiatric Press Textbook of Neuropsychiatry second edition Annotation copyright by Book News Inc Portland OR Handbook of Research on Face Processing Andrew W. Young, Hadyn Ellis, 1989 The high degree of scientific interest in face processing is readily understandable since people's faces provide such a wealth of social information Moreover investigations have produced evidence of highly precocious face processing abilities in infants and of neural mechanisms in adults that seem to be differentially involved in face perception Such findings demonstrate that as one might expect the psychological importance of the face has clear biological underpinnings There are also urgent practical reasons for wanting to understand face processing The most extensively investigated of these involve forensic issues Other

applications include the development of automated recognition systems for security and other purposes and understanding and rehabilitating disorders and impairments linked to brain injuries and psychiatric conditions Current studies of face processing are grouped in the volume into eleven topic areas For each area the editors approached an acknowledged authority and commissioned a review chapter summarising the findings that have been made These chapters were then circulated to other experts who were asked to write brief commentaries that developed theoretical or empirical points of importance to each area In this way a balanced coverage of each topic is achieved The book begins with a section examining the evidence suggesting that there may be something special about face processing This is followed by consideration of the face as a visual pattern Then there are four sections dealing with major uses of facial information followed by sections discussing the development of face processing abilities and the neural mechanisms involved The last three sections of the book deal with topics for which there are important practical applications for the studies reported
