Adam West as a Signature Role TV Star Carl Sweeney, 2025-03-11 This book proposes the signature role TV star as a new theoretical category of stardom by evaluating Adam West as a quintessential example of this type of figure West was best known for playing the titular role in the 1960s television series *Batman* After *Batman* was cancelled West was unable to develop a lasting career as a mainstream leading man meaning that his signature role remained the defining aspect of his public image In various ways West demonstrated that the strong link with a signature televisual role can generate new inflections over time meaning that he embodies both the advantages and disadvantages of this form of stardom The analysis of West as an archetypal signature role TV star is accomplished within a star studies theoretical framework that focuses on his onscreen roles his promotional and publicity appearances and criticism and commentary materials about him The signature role TV star category proposed in this book can be utilised to illuminate the significance of other television stars who have been overlooked by scholars This book will have relevance for undergraduate and postgraduate students of Film Studies Television Studies Media and Communication Studies Cultural Studies Visual Studies and Comics Studies **The**

with Michael Jordan that transformed an athletic product into a global icon a risky contract that became the big bang of sneaker culture The Tech Arms Race The decade of aggressive innovation from Reebok's Pump technology that promised a custom fit to the visible cushioning of Air Max and the low top revolution sparked by Kobe Bryant The Street Status How the shoes escaped the court and became inseparable from hip hop streetwear and the global resale market evolving into digital status symbols and coveted collectibles The history of basketball shoes is more than a timeline of products it is a story of culture identity rebellion and style told through the footwear that helped shape the sport and the players who turned those shoes into legends Lace up and explore the soul of the game one icon at a time Pulsation and Mass Loss in Stars R. Stalio, L.A. Willson, 1988-07-31 Stellar mass loss is an essential part of the cycling of material from the interstellar medium into stars and back and must be understood if we are to model processes on galactic to cosmological scales The study of stellar winds and the effects of stellar mass loss has reached a particularly exciting stage where observational capabilities are increasingly able to provide interesting constraints on models and theories Recent results from theoretical and observational work for both hot and cool stars with substantial winds have led to the suggestion that a combination of pulsation with other mechanisms makes for particularly efficient mass loss from stars This provided the original motivation for the organization of this workshop The conference was organized along relatively conventional lines according to the types of objects being scrutinized However the true unity of the proceedings comes from the interplay of the mechanisms involved For example for the cool luminous Mira variables pulsation leads to shock waves that extend the atmosphere enhancing dust formation radiation pressure on dust drives the wind cooling the atmosphere and in some cases suppressing the shocks Similarly for the Be stars both pulsation in this case non radial and radiation pressure due to UV resonance lines are expected to be important and this expectation is at least qualitatively borne out by the observations **Stars and Stellar Processes** M.
