Features: Discussion of anatomy in the context of disease states making the consequence of disease more readily understood. Combined illustrations and tables present complex information in an easy to follow manner. Original clinical case studies, optic disc photographs, visual fields, clinical course and other data from an illustrative case are presented together to give you a visual summary of the disease. Photographic surveys of disease manifestations, clinical photographs from different patients with the same disease demonstrate the full spectrum of disease presentation. Tables and boxes devoted to differential diagnosis. Important clinical decision making information is synthesized and reinforced in a convenient outline form. Key points summarized at the end of each chapter. Suggested readings at the end of each chapter.
