Practical Time Stepping Schemes:

Practical Time-stepping Schemes W.L. Wood, 1990 The experienced author provides detailed description and discussion of the strengths and limitations of the algorithms most commonly used to solve the linear nonlinear ordinary partial differential equations encountered in mainly engineering contexts He writes clearly and makes effective use of realistic examples Eight chapters a few exercises solutions at the end of the book are provided at the end of the first five chapters Attractively designed and produced with useful references Reflects deep familiarity with the realities of the engineering mind NW Annotation copyrighted by Book News Inc Portland OR Discretisation techniques for large deformation computational contact elastodynamics Franke, Marlon, 2014-10-22 The present thesis deals with large deformation contact problems of flexible bodies in the field of nonlinear elastodynamics Special emphasis will be placed on a consistent spatial and temporal discretization For the spatial discretization of the underlying bodies the finite element method will be used For the contact boundaries the collocation type node to surface method as well as the variationally consistent Mortar method will be applied **Computational Methods in Earthquake Engineering** Manolis Papadrakakis, Michalis Fragiadakis, Vagelis Plevris, 2013-05-30 This book provides an insight on advanced methods and concepts for the design and analysis of structures against earthquake loading This second volume is a collection of 28 chapters written by leading experts in the field of structural analysis and earthquake engineering Emphasis is given on current state of the art methods and concepts in computing methods and their application in engineering practice The book content is suitable for both practicing engineers and academics covering a wide variety of topics in an effort to assist the timely dissemination of research findings for the mitigation of seismic risk Due to the devastating socioeconomic consequences of seismic events the topic is of great scientific interest and is expected to be of valuable help to scientists and engineers The chapters of this volume are extended versions of selected papers presented at the COMPDYN 2011 conference held in the island of Corfu Greece under the auspices of the European Community on Computational Methods in Applied Sciences ECCOMAS Modellbildung und numerische Mechanik tensegrer Strukturen Sönke Carstens, 2013
