## **Regulating Danger:**

**Regulating Danger** James Whiteside, 1990-01-01 From the 1880s to the 1980s more than eight thousand workers died in the coal mines of the Rocky Mountain states Sometimes they died by the dozens in fiery explosions but more often they died alone crushed by collapsing roofs or runaway mine cars Many old timers in coal mining communities and even some historians have blamed the high fatality rate on ruthless coal barons exploiting miners in the single minded pursuit of profit The coal industry preferred to blame careless miners James Whiteside looks beyond those charges in seeking to explain why the western coal mines were and to some degree still are dangerous and why territorial state and federal laws failed for so long to make them safer *Regulating Danger* is the first extended study of the coal mining industry in Colorado New Mexico Utah Wyoming and Montana It exceeds the scope of traditional labor history in focusing on working conditions and the problems of workers instead of unions and strikes After examining the inherent physical dangers of the work Whiteside shows how the interplay of economic social and technological forces created an environment of death in the western coal mines He goes on to discuss evolving industrial and political attitudes toward issues of responsibility for mine safety and government regulation and the fundamental changes in the industry that brought about safer working conditions [Risk Assessment and Risk Management](#) R E Hester, R M Harrison, 2007-10-31 Risk assessment is considered by many analysts to be an objective scientific tool It is considered to be variously influenced by broader issues which in turn have important practical implications both for risk assessors and decision makers *Risk Assessment and Risk Management* examines a range of practical applications of risk assessment methods and risk management procedures in the broad context of environmental science and technology Written by acknowledged experts in the field the articles cover a variety of areas with reference to subjects as diverse as BSE the use of risk assessment in government using computer modelling as an aid to risk assessment in the case of accidental contamination of rivers and estuaries quantitative cancer risk assessment related to carcinogens in the environment landfilling of household wastes environmental risk assessment and management of chemicals and aquatic risk assessment and management of pesticides This book provides a detailed and wide ranging review of the many aspects of risk assessment and risk management which have excited so much debate and controversy in recent times It will be essential reading for all those involved in the assessment and management of risk particularly in the context of environmental science

*Risk Regulation in the Internal Market* Maria Weimer, 2019-03-13 This book offers a topical inquiry into the legal and political limits of EU regulation in the field of risk and new technologies surrounded by techno scientific complexity uncertainty and societal contestation It uses agricultural biotechnology as a paradigmatic example to illustrate the complex intertwinement between environmental public health economic and social concerns in risk regulation Weimer analyses the drawbacks of the EU approach to agricultural biotechnology showing that its reductionism i e the narrow understanding of GMO risks as well as the exclusion of broader societal concerns related to environmental and social sustainability has

undermined both the legitimacy and effectiveness of EU regulation in this area. Resistance to this approach however has also triggered legal innovations prompting us to re think EU internal market law including the way in which it manages the tensions between unity and diversity and between social and economic concerns. This text offers fresh and original insights into how far the EU can go in harmonizing regulatory approaches to risk. At the same time it proposes new ways of re thinking EU risk regulation to make it more responsive to different perspectives on risk and technology. A unique feature of this book is that it contributes to various strains of scholarship including risk regulation, internal market law, public administration and studies of governance and regulation as well as connecting these themes to broader debates about the legitimacy of European integration and new ways of differentiated integration. As a result it assists in re imagining the EU internal market and its regulation as a site of diversity.

*Transnational Narratives and Regulation of GMO Risks* Giulia Claudia Leonelli, 2021-11-04. This book provides an innovative insight into the regulatory conundrum of genetically modified organisms (GMOs) by deploying transnational legal analysis as a methodological framework to explore the most controversial area of risk governance. The book deconstructs hegemonic and counter hegemonic transnational narratives on the governance of GMO risks cutting across US law, EU law, the WTO Agreement on Sanitary and Phytosanitary Measures and hybrid standard setting regimes. Should uncertain risks be run unless adverse effects have been conclusively established and should regulators only act where this is cost benefit effective? Should risk managers make a convincing case that a product or process is safe enough for the relevant uncertain risks to be socially acceptable? How can intractable transnational regulatory conflicts be solved? The book complements a close analysis of regulatory frameworks and case law with a more encompassing perspective on the political, socio economic and distributional implications of different approaches to the regulation of health and environmental risks at times of globalisation. The GMO deadlock thus becomes a lens through which to investigate the underlying value systems, goals and impacts of transnational discourses on risk governance. Against this backdrop the normative strand of analysis points to the limited ability of science and procedural deliberation to generate authentic agreement and to identify normatively legitimate solutions in the absence of pre existing shared perspectives.

Understanding Regulation Robert Baldwin, Martin Cave, Martin Lodge, 2012. An introduction to the practical and theoretical issues that are central to the study of regulation with a particular focus on contested areas and how they are dealt with.

**European Food Regulation after Enlargement** Karolina Żurek, 2011-11-11. This book presents a critical legal perspective on the current direction of EU food regulation. Analysing three regulatory mechanisms: mutual recognition, scientific risk regulation and standardisation in the evolution of food legislation in the EU, the book shows the inadequacy of the current framework in facing the challenges of enlargement. Using the particular experience of a new member state, Poland, the book argues that an enlarged Europe must not disregard diverse socio economic implications of market regulation. Due to historical legacies and a bias in favour of homogeneity the EU food regulatory regime has generated a one

dimensional crisis oriented approach As a result it tends to overlook other legitimate concerns such as quality diversity and local traditions This book argues that this need not be so     *Administering Danger in the Workplace* Eric Tucker,1990
