Regulation Through Revelation The Origin Politics And Impacts Of The Toxics Release Inventory Program:

Regulation through Revelation James T. Hamilton, 2005-08-29 Information provision is increasingly being used as a regulatory tool The US Environmental Protection Agency's Toxics Release Inventory TRI Program required facilities that handle threshold amounts of specific chemicals to report yearly their releases and transfers of these toxic substances The TRI data have become the yardstick by which regulators investors environmental organizations and local community groups measure company environmental performance This book which was originally published in 2005 tells the story of the TRI from its origin and implementation to its revision and retrenchment The mix of case study and quantitative analysis shows how the TRI operates and how the information provided affects decisions in both the public and private sectors The lessons drawn about the operation of information provision programs should be of interest to multiple audiences

The Oxford Handbook of U.S. Environmental Policy Sheldon Kamieniecki, Michael Kraft, 2013 Prior to the Nixon administration environmental policy in the United States was rudimentary at best Since then it has evolved into one of the primary concerns of governmental policy from the federal to the local level As scientific expertise on the environment rapidly developed Americans became more aware of the growing environmental crisis that surrounded them Practical solutions for mitigating various aspects of the crisis air pollution water pollution chemical waste dumping strip mining and later global warming became politically popular and the government responded by gradually erecting a vast regulatory apparatus to address the issue Today politicians regard environmental policy as one of the most pressing issues they face The Obama administration has identified the renewable energy sector as a key driver of economic growth and Congress is in the process of passing a bill to reduce global warming that will be one of the most important environmental policy acts in decades The Oxford Handbook of U.S. Environmental Policy will be a state of the art work on all aspects of environmental policy in America Over the past half century America has been the world's leading emitter of global warming gases However environmental policy is not simply a national issue It is a global issue and the explosive growth of Asian countries like China and India mean that policy will have to be coordinated at the international level The book will therefore focus not only on the U.S. but on the increasing

importance of global policies and issues on American regulatory efforts This is a topic that will only grow in importance in the coming years and this will serve as an authoritative guide to any scholar interested in the issue Conserving Data in the Conservation Reserve James Hamilton, 2012-06-25 Enrolling over 30 million acres the U S Conservation Reserve Program CRP is the largest conservation program in the United States Under the guidelines of the CRP the federal government pays farmers to stop farming their land in the hopes of achieving a variety of conservation goals including the reduction of soil erosion improvement of water quality and creation of wildlife habitat In Conserving Data James T Hamilton explores the role of information in the policy cycle as it relates to the CRP The author asks how the creation and distribution of information about what is going on across these millions of enrolled acres has influenced the development of the program itself Of the many CRP stakeholders each accesses a different set of information about the CRP s operations Regulators have developed the Environmental Benefits Index as a rough indicator of a fields conservation benefits and adopted that measure as a way to determine which lands should be granted conservation contracts NGOs have used publicly available data from these contracts to show how CRP monies are allocated Members of Congress have used oversight hearings and GAO reports to monitor the Farm Service Agency s conservation policy decisions Reporters have localized the impact of the CRP by writing stories about increases in wildlife and hunting on CRP fields in their areas Conserving Data brings together and analyzes these various streams of information drawing upon original interviews with regulators new data from Freedom of Information Act requests and regulatory filings Using the CRP as a launch point Hamilton explores the role of information including hidden information in the design and implementation of regulatory policy Bureaucracy and Democracy: Accountability and Performance 3E William T Gormley, Steven J Balla, 2013 Given the influence and impact of public bureaucracies in policy implementation and the accountability they owe to the American public their performance must be assessed in a systematic manner With this new edition the authors revisit their four key perspective bounded rationality principal agent theory interest group mobilization and network theory to help students develop an analytic framework for comprehensively evaluating bureaucratic performance Full Disclosure Archon Fung, Mary Graham, David Weil, 2007 Publisher description
