Seismic Performance of Corroded Reinforced Concrete Structures Retrofitted with FRP Dejian Shen, 2024-07-05 This monograph is written based on the author's research on seismic assessment and retrofitting of corrosion damaged reinforced concrete structures during the recent two decades It points out that reinforcement corrosion is one of the main reasons that contribute to the deterioration of the seismic performances and durability of reinforced concrete structures It illustrates that the mechanism of reinforcement corrosion should be investigated to propose a method for evaluating the seismic performance of corroded components and structures It calls for a comprehensive investigation on the bond performance between corroded reinforcing bars and concrete as well as the degradation law of seismic performance of corroded beams columns beam column joints and shear walls from the perspectives of materials components and structures With the promotion and application of composite materials fiber reinforced polymer FRP has been proposed as an ideal material for retrofitting reinforced concrete structures By emphasizing the mechanism of reinforcement corrosion and the integrated evaluation of materials components and structures this monograph offers an idea of using FRP to retrofit the seismic performance of corroded reinforced concrete structures It is designed as a reference work for professionals or practitioners and a textbook for undergraduates or postgraduates This book provides valuable knowledge and useful methods that can be considered in the field of seismic assessment and retrofitting of corrosion damaged reinforced concrete structures with other FRPs

Advanced Methods for Seismic Performance Evaluation of Building Structures Sang Whan Han, 2021-01-21 This Special Issue was created to collect the most recent and novel research on seismic performance evaluation of building structures This issue includes three important topics on seismic engineering for building structures 1 seismic design and performance evaluation 2 structural dynamics and 3 seismic hazard and risk analysis To protect building structures from earthquakes it is necessary to conduct seismic performance evaluations on structures with reliable methods and to retrofit these structures appropriately using the results of the seismic performance evaluation

Proceedings of the 2024 3rd International Conference on Structural Seismic Resistance, Monitoring and Detection (SSRMD 2024) Abhijit Mohanrao Zende, Yongding Tian, Lingkun Chen, Saeed Ghaffarpour Jahromi, 2024-04-26 This is an open access book With the deepening of urbanization there are more and more buildings in the city The buildings are also gradually

diversifying and becoming more complex. However, while the aesthetics of the building are improved, the safety of the building also needs to be fully guaranteed. Whether it is the influence of natural disasters or human factors, it may lead to damage to building structures. Therefore, the structure in civil buildings is earthquake resistant, and the problems of disaster prevention and mitigation are emerging in an endless stream and they need to be solved urgently. In order to solve the above problems, more and more experts and scholars have conducted in-depth research in this field, and various seismic resistance in the field of civil engineering and construction, new theories of monitoring and testing, new technologies and new products have emerged, and academic exchanges in this field have become increasingly active.

2024 3rd International Conference on Structural Seismic Resistance Monitoring and Detection SSRMD 2024 will be held in Harbin on January 19-21, 2024. The conference aims to provide a platform for experts and scholars in the fields of civil architecture, structural earthquake resistance, and related monitoring and testing technology to communicate and learn. The conference sincerely invites experts and scholars from universities and scientific research institutions at home and abroad, business people, and other relevant personnel to participate in the conference and exchange. Scholars at home and abroad are welcome to submit articles and participate in the conference.

Spatial Modelling and Failure Analysis of Natural and Engineering Disasters through Data-based Methods - Volume II Faming Huang, Zizheng Guo, Huokun Li, Hai Lin, 2023-08-01

Earthquake Disaster Simulation of Civil Infrastructures Xinzheng Lu, Hong Guan, 2021-02-01

The first edition of this monograph presenting accurate and efficient simulations of seismic damage to buildings and cities has received significant attention from the research community. To keep abreast of the rapid development in recent years, our latest breakthrough achievements have been added to this new edition, including novel resilient structural components, secondary disaster simulations, emergency responses, and resilient recovery of communities after earthquake. This edition comprehensively covers a range of numerical modeling approaches, higher performance computation methods, and high fidelity visualization techniques for earthquake disaster simulation of tall buildings and urban areas. It also demonstrates successful engineering applications of the proposed methodologies to typical landmark projects, e.g., Shanghai Tower and CITIC Tower, two of the world's tallest buildings, Beijing CBD and San Francisco Bay Area. Reported in this edition are a collection of about 60 high impact journal publications which have already received high citations.

Comparative Performances of Seismic Design Codes for Concrete Structures American Concrete Institute,1999

The international seminar on Comparative Performances of Seismic Design Codes was the first opportunity for The Concrete Committee of the Japan Society of Civil Engineers JSCE to organize an international event to disseminate its own research products and activities world wide The topic of the seminar was selected following the 1996 publication of The Seismic Design Code by The Concrete Committee of JSCE The damages suffered by modern concrete structures during the Hyogoken Nanbu Earthquake in 1995 was the principal motivation for these revisions of the code This presented an opportunity to try to compare the performance of the revised code with those of existing major seismic design codes in the world i e CALTRANS Code EURO Code 8 NEW ZEALAND Code Due to the unique seminar format Volume 1 of the proceedings introduced explanatory notes for the four codes In addition the four codes were applied to the comparative designs of bridge piers by The Committee on Comparative Design of Bridge Piers The outcome of this was remarkable as shown in this work Diversities to the designed sections according to the different codes were shown even though the ground motions mass of super structures and materials were the same throughout the designed bridge piers Differences were particularly noted for high piers with large ground acceleration In the seminar fundamental reasons for these differences were discussed and numerical evaluations presented Volume 1 was published prior to the seminar Volume 2 was published after the seminar concluded Volume 2 of the seminar proceedings includes the discussion for the contents of Volume 1 and the main elements of the four codes Therefore some of the modifications for the trial design of bridge piers in Volume 1 are also included reflecting the discussion at the seminar Besides these the contents include the numerical evaluation of designed bridge piers which conclude the comparison of the performances of four major seismic design codes as a whole As appendices the main provisions of the four codes that are used in designing are attached so that the readers of the books will benefit from the convenience of the reference The overall aim of the International Seminar on Comparative Performances of Seismic Design Codes for Concrete Structures are thus accomplished and we are quite sure that this will help structural engineers who are engaged in seismic design of RC structures to understand the differences of the basic ideas underlying in each of the seismic design code provisions with ease and to make most of those
