Regulatory Mechanisms Of Intracellular Membrane Transport:

Regulatory Mechanisms of Intracellular Membrane Transport Sirkka Keränen, Jussi Jääntti, 2004-08-27 This book deals with the molecular mechanisms of membrane trafficking a central eukaryotic cell biological process In the post genomic era many essential molecules involved in intracellular membrane protein transport are emerging A huge task now is to compile the molecular networks that govern these processes Understanding of regulatory processes and participating molecules are likely to reveal global cellular regulatory circuits that couple membrane trafficking with other cellular functions Such cell biological features are only starting to emerge This book puts special emphasis on such mechanisms and processes The contents discusses the role of coat proteins tethering complexes small rab GTPases Sec1 family proteins and SNARE molecule phosphorylation in exocytosis endocytosis and membrane fusion In addition the role of lipids in vesicle formation and membrane fusion and some specialized cell biological denovo membrane generation processes are discussed

Advances in Comparative and Environmental Physiology F. Lang,D. Häussinger,1993-05-25 One of the prerequisites for survival is the ability of cells to maintain their volume Thus during the course of evolution cells have learned a variety of strategies to achieve volume homeostasis This volume regulatory machinery involves regulation of both cellular metabolism and cellular transport and is exploited by hormones and transmitters to regulate cellularfunction This book to illustrates the complex interplay of cell volume regulatory mechanisms and cellular function in a variety of tissues However our knowledge is still far from being conclusive and the present collection of reviews is thought to foster further experimental efforts to unravel the role of cell volume in the integrated function of cells *Horizons in Biochemistry and Biophysics* Ernesto

Quagliariello, F. Palmieri, Thomas Peter Singer, 1982 **Molecular Biology of the Cell**, 2005 Membrane Dynamics and Signaling E. Edward Bittar, 1992 Volumes 5A and 5B of Fundamentals of Medical Cell Biology are a treatment of several key subjects including cellular signaling One profitable way to tackle both volumes is to read them with care but without endeavouring to master most of the details Then should follow a more plodding study chapter by chapter Such a strategy is also urged in respect of the preceding volumes Although each chapter is only as detailed as space permits it should in the case of the student serve as an incentive to the study of the original papers Oral Microbiology and Infectious Disease George Wesley Burnett, George S. Hall, 1992 **Canadian Journal of Physiology and Pharmacology**, 1996 *Handbook of Physiology*, 1997 **Handbook of Physiology** Joseph F. Hoffman, James D. Jamieson, 1997 The aim of this handbook is to survey key areas in modern cellular and molecular physiology The topics covered range from the most fundamental biophysical and biochemical bases of cellular physiology to more concerted cellular biological processes A more elusive goal of this volume is to provide a framework for future research linking these various processes in whole animal systems The chapters begin with descriptions of basic membrane processes including membrane structure as it relates to function the biophysics of membrane transport and cell volume regulatory mechanisms The organization and function of the plasma membrane and intracellular organelles involved in membrane trafficking and the biogenesis of cell polarity are then reviewed in depth Energy generation and transduction subserving cellular function are covered in another series of chapters The structure and function of the cytoskeleton and its relationship to events regulated by interaction with the extracellular matrix are examined in detail Chapters on the integrative aspects of cellular physiology including immunobiology cellular interactions fertilization and interactions of cells with the extracellular matrix round out this authoritative survey of contemporary cellular physiology Researchers instructors post doctorate and graduate students will find it a uniquely useful resource **Current Topics in Membranes**, 1996 The plasma membrane acts as both a boundary and a site of exchange between the outside and the inside of a cell The cytoskeleton plays essential roles in delineating membrane protein distributions in defining structural and functional domains in the plasma membrane and in regulating membrane protein and ultimately cell function This volume reviews the regulation of membrane protein distribution organization and function at the plasma membrane by the cytoskeleton Discussions also include the roles of cytoskeleton in the structural and functional organization of membranes and membrane proteins with emphasis on key problems the current status of understanding experimental approaches and future directions *Peterson's Guide to Graduate Programs in the Biological and Agricultural Sciences*, 1991
