Algorithms and Architectures for Parallel Processing Yang Xiang, Ivan Stojmenovic, Bernady O. Apduhan, Guojun Wang, Koji Nakano, Albert Y. Zomaya, 2012-09-04 The two volume set LNCS 7439 and 7440 comprises the proceedings of the 12th International Conference on Algorithms and Architectures for Parallel Processing ICA3PP 2012 as well as some workshop papers of the CDCN 2012 workshop which was held in conjunction with this conference The 40 regular paper and 26 short papers included in these proceedings were carefully reviewed and selected from 156 submissions The CDCN workshop attracted a total of 19 original submissions 8 of which are included in part II of these proceedings The papers cover many dimensions of parallel algorithms and architectures encompassing fundamental theoretical approaches practical experimental results and commercial components and systems *Handbook of Peer-to-Peer Networking* Xuemin Shen, Heather Yu, John Buford, Mursalin Akon, 2010-03-03 Peer to peer networking is a disruptive technology for large scale distributed applications that has recently gained wide interest due to the successes of peer to peer P2P content sharing media streaming and telephony applications There are a large range of other applications under development or being proposed The derlying architectures share features such as decentralization sharing of end system resources autonomy virtualization and self organization These features constitute the P2P paradigm This handbook broadly addresses a large cross section of current research and state of the art reports on the nature of this paradigm from a large number of experts in the field Several trends in information and network technology such as increased performance and deployment of broadband networking wireless networking and mobile devices are synergistic with and reinforcing the capabilities of the P2P paradigm There is general expectation in the technical community that P2P networking will continue to be an important tool for networked applications and impact the evolution of the Internet A large amount of research activity has resulted in a relatively short time and a growing community of researchers has developed The Handbook of Peer to Peer Networking is dedicated to discussions on P2P networks and their applications This is a comprehensive book on P2P computing Global Data Management R. Baldoni, G. Cortese, F. Davide, 2006-07-26 Some researcher has created the vision of the data utility as a key enabler towards ubiquitous and pervasive computing Decentralization and replication would be the approach to make it resistant against security attacks This book presents an organic view on the research and technologies which bring us towards the realization of the vision **Proceedings**, 2005 **Dependability Benchmarking for Computer Systems** Karama Kanoun, Lisa Spainhower, 2008-10-03 A comprehensive collection of benchmarks for measuring dependability in hardware software systems As computer systems have become more complex and mission critical it is imperative for systems engineers and researchers to have metrics for a system's dependability reliability availability and serviceability Dependability

benchmarks are useful for guiding development efforts for system providers acquisition choices of system purchasers and evaluations of new concepts by researchers in academia and industry This book gathers together all dependability benchmarks developed to date by industry and academia and explains the various principles and concepts of dependability benchmarking It collects the expert knowledge of DBench a research project funded by the European Union and the IFIP Special Interest Group on Dependability Benchmarking to shed light on this important area It also provides a large panorama of examples and recommendations for defining dependability benchmarks Dependability Benchmarking for Computer Systems includes contributions from a credible mix of industrial and academic sources IBM Intel Microsoft Sun Microsystems Critical Software Carnegie Mellon University LAAS CNRS Technical University of Valencia University of Coimbra and University of Illinois It is an invaluable resource for engineers researchers system vendors system purchasers computer industry consultants and system integrators TENCON 2004, 2004 **From Traditional Fault Tolerance to Blockchain** Wenbing Zhao, 2021-04-28 This book covers the most essential techniques for designing and building dependable distributed systems from traditional fault tolerance to the blockchain technology Topics include checkpointing and logging recovery orientated computing replication distributed consensus Byzantine fault tolerance as well as blockchain This book intentionally includes traditional fault tolerance techniques so that readers can appreciate better the huge benefits brought by the blockchain technology and why it has been touted as a disruptive technology some even regard it at the same level of the Internet This book also expresses a grave concern on using traditional consensus algorithms in blockchain because with the limited scalability of such algorithms the primary benefits of using blockchain in the first place such as decentralization and immutability could be easily lost under cyberattacks *Proceedings of the 2004 Joint Workshop on Foundations of Mobile Computing* Stefano Basagni, Cynthia Phillips, 2004 *Proceedings of the ... USENIX Security Symposium*, 2005 **Book Review Index Cumulation** Dana Ferguson, 2005-09 Book Review Index provides quick access to reviews of books periodicals books on tape and electronic media representing a wide range of popular academic and professional interests The up to date coverage wide scope and inclusion of citations for both newly published and older materials make Book Review Index an exceptionally useful reference tool More than 600 publications are indexed including journals and national general interest publications and newspapers Book Review Index is available in a three issue subscription covering the current year or as an annual cumulation covering the past year *Synergy* Thomas S.
