

Medical Pioneers

Alexander Fleming (1881-1955)

Field of Study:

Bacteriology and Antibiotics

How He Became a Medical Pioneer:

Alexander Fleming was a Scottish bacteriologist who discovered penicillin, the world's first true antibiotic, in 1928. He noticed that a mould called *Penicillium notatum* had accidentally killed bacteria growing in a petri dish. Fleming realised the mould produced a substance that could kill many types of bacteria, and he named it penicillin. Although he struggled with a large quantity of the antibiotic, his discovery eventually revolutionised the treatment of bacterial infections.

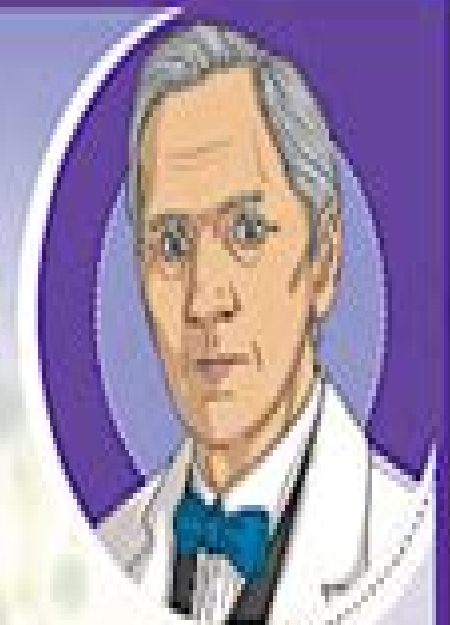

Impact on Medicine:

Penicillin has saved millions of lives by effectively treating infections like pneumonia, strep throat, and wound infections. Fleming's work marked the beginning of the antibiotic era, drastically reducing deaths from bacterial diseases. The discovery of ampicillin led to the development of more antibiotics and changed the way bacterial infections are treated, making surgeries safer and extending life expectancy.
