Long,2003-04-30 A history of the book and intellectual property that includes military technology and military secrets Winner of The Morris D Forkosch Prize from the Journal of the History of Ideas In today s world of intellectual property disputes industrial espionage and book signings by famous authors one easily loses sight of the historical nature of the attribution and ownership of texts In Openness Secrecy Authorship Technical Arts and the Culture of Knowledge from Antiquity to the Renaissance Pamela Long combines intellectual history with the history of science and technology to explore the culture of authorship Using classical Greek as well as medieval and Renaissance European examples Long traces the definitions limitations and traditions of intellectual and scientific creation and attribution She examines these attitudes as they pertain to the technical and the practical Although Long s study follows a chronological development this is not merely a general work Long is able to examine events and sources within their historical context and locale By looking at Aristotelian ideas of Praxis Techne and Episteme She explains the tension between craft and ideas authors and producers She discusses with solid research and clear prose the

rise wane and resurgence of priority in the crediting and lionizing of authors Long illuminates the creation and re creation of ideas like trade secrets plagiarism mechanical arts and scribal culture Her historical study complicates prevailing assumptions while inviting a closer look at issues that define so much of our society and thought to this day She argues that a useful working definition of authorship permits a gradation of meaning between the poles of authority and originality and guides us through the term s nuances with clarity rarely matched in a historical study *Steinformen* Isabella

Laboratories of Art Sven Dupré, 2014-04-25 This book explores the interconnections and differentiations between artisanal workshops and alchemical laboratories and between the arts and alchemy from Antiquity to the eighteenth century In particular it scrutinizes epistemic exchanges between producers of the arts and alchemists In the fifteenth and sixteenth centuries the term laboratorum uniquely referred to workplaces in which chemical operations were performed smelting combustion distillation dissolution and precipitation Artisanal workshops equipped with furnaces and fire in which chemical operations were performed were also known as laboratories Transmutational alchemy the transmutation of all base metals into more noble ones especially gold was only one aspect of alchemy in the early modern period The practice of alchemy was also about the chemical production of things medicines porcelain dyes and other products as well as precious metals and about the knowledge of how to produce them This book uses examples such as the Uffizi to discuss how Renaissance courts established spaces where artisanal workshops and laboratories were brought together thus facilitating the circulation of materials people and knowledge between the worlds of craft today s decorative arts and alchemy Artisans became involved in alchemical pursuits beyond a shared material culture and some crafts relied on chemical expertise offered by scholars trained as alchemists Above all texts and books products and symbols of scholarly culture played an increasingly important role in artisanal workshops In these workplaces a sort of hybrid figure was at work With one foot in artisanal and the other in scholarly culture this hybrid practitioner is impossible to categorize in the mutually exclusive categories of scholar and craftsman By the seventeenth century the expertise of some glassmakers silver and goldsmiths and producers of porcelain was just as based in the worlds of alchemical and bookish learning as it was grounded in hands on

work in the laboratory This book suggests that this shift in workshop culture facilitated the epistemic exchanges between alchemists and producers of the decorative arts
