pCO₂ Change: Observations, Simulations and Paleorecords Zhifang Xiong, Di Qi, Xu Zhang, Thomas Algeo, Jun Zhao, 2025-01-02 The Southern Ocean plays a key role in atmospheric CO₂ sequestration accounting for 40–50% of the anthropogenic CO₂ absorbed by the modern ocean. The size of this sink is attributed to strong water mass sinking in the intermediate water and bottom water formation which transports carbon to the mid and deep ocean thus isolating it from the atmosphere for centuries. The Southern Ocean also played a critical role in atmospheric pCO₂ variations in the geologic past on both orbital and millennial timescales. Moreover, the Southern Ocean modulates atmospheric and oceanic circulation in the tropics remotely influencing low latitude atmospheric CO₂ exchange. Thus the Southern Ocean is a key component of the global climate system whose operation must be better understood at a range of timescales in order to accurately assess its effects on atmospheric pCO₂ in the future. This Research Topic will consist of a set of cutting edge investigations of the processes and mechanisms of Southern Ocean influence on atmospheric pCO₂ and global climate change. **Precipitation**

Vincenzo Levizzani, Christopher Kidd, 2025-08-23 This book provides a comprehensive and in depth exploration of the physics involved in the formation of precipitation in the Earth's atmosphere. It begins by emphasizing the significance of precipitation in the Earth system and climate. Cloud physics is incorporated to provide readers with the essential physical background necessary to understand the process of hydrometeor formation within clouds. Subsequently, the intricate structure of precipitation systems is elucidated, aiding readers in comprehending the mesoscale and synoptic characteristics of precipitation organization. The book concludes with a section on precipitation observation and measurements which examines various sensors such as gauges, radars, satellites and platforms. These networks enable access to global precipitation data for meteorology and climate analysis. Designed to meet the needs of graduate and PhD students in fields such as geophysics, meteorology, climate science, hydrology, environmental sciences, water management and geography, this book is also valuable for researchers and professionals from diverse disciplines who require a solid understanding of precipitation products for their work. Although the book requires a fundamental understanding of classical physics including dynamics, thermodynamics, electricity and magnetism as well as a basic grasp of inorganic chemistry, its content remains accessible and informative for readers with diverse levels of expertise. **Pkg Acp-Chemistry 131** Gillette, 2002-07-01 **Pkg Acp-Chemistry 107 Lab** **Man** GILLETTE, 2002-07-01 **Fourth ACP-EEC Convention Signed in Lomé on 15 December 1989**, 1991
