**High Tc Superconductors and Related Transition Metal Oxides** Annette Bussmann-Holder, Hugo Keller, 2007-03-29 This book presents theoretical as well as experimental articles focused on recent new results in high temperature superconductivity All contributors are high ranking scientists who have done major work to enhance the understanding of this phenomenon A few articles deal with ferroelectricity and its applications The book is dedicated to Prof Dr K Alex Müller on his 80th birthday During his scientific career he made major advances in the understanding of ferroelectricity

**Spider Webs** William Eberhard, 2020-12-22 In this lavishly illustrated first ever book on how spider webs are built function and evolved William Eberhard provides a comprehensive overview of spider functional morphology and behavior related to web building and of the surprising physical agility and mental abilities of orb weavers For instance one spider spins more than three precisely spaced morphologically complex spiral attachments per second for up to fifteen minutes at a time Spiders even adjust the mechanical properties of their famously strong silken lines to different parts of their webs and different environments and make dramatic modifications in orb designs to adapt to available spaces This extensive adaptive flexibility involving decisions influenced by up to sixteen different cues is unexpected in such small supposedly simple animals As Eberhard reveals the extraordinary diversity of webs includes ingenious solutions to gain access to prey in esoteric habitats from blazing hot and shifting sand dunes to capture ants to the surfaces of tropical lakes to capture water striders Some webs are nets that are cast onto prey while others form baskets into which the spider flicks prey Some aerial webs are tramways used by spiders searching for chemical cues from their prey below while others feature landing sites for flying insects and spiders where the spider then stalks its prey In some webs long trip lines are delicately sustained just above the ground by tiny rigid silk poles Stemming from the author's more than five decades observing spider webs this book will be the definitive reference for years to come

**Reactive Transport in Soil and Groundwater** Gunnar Nützmann, Paolo Viotti, Per Aagaard, 2006-02-08 Technologies for soil remediation require real knowledge and understanding of the processes involved and a correct and complete numerical approach in order to reach the best results at the lowest possible cost The authors focus on the improvement of the scientific base for the development of integrated indicators of the environmental risks created by the presence of pollutants in water and porous media They deliver insights into the understanding of integrated process and also modeling capabilities The establishment of a set of integrated indicators to evaluate the pollution status and risk of water resources will considerably aid environmental agencies administrators and regulators and profit the society as a whole

Habermeier, Michael L. Hitchman, 1997 Hardbound The four day EMRS Spring Meeting in Strasbourg France June 4 7 1996 Symposium on High Temperature Superconductor Thin Films Growth Mechanisms Interfaces Multilayers was held in conjunction with the Third Workshop in Europe The benefit of including the Workshop into the Symposium was the advantage of bringing in an additional far larger and disciplinarily more diverse audience and through the organization of the workshop receiving invited and contributed lectures as well as posters which was supplemental to the main Symposium The Symposium focused on the

specific topics of growth interfaces and multilayers and highlighted the continuing need for there to be active interplay between chemists designing new precursor molecules and depositing thin films and engineers applying HTS materials with deficiencies and limitations to commercially oriented devices. The majority of papers presented at the Symposium are included in these pro
