Challenges to Fiscal Adjustment in Latin America Organisation for Economic Co-operation and Development, 2006-02-23 Despite considerable progress made by Latin America's biggest economies in putting their finances in order numerous challenges remain Public spending needs to incorporate more flexibility ageing populations and social demands threaten future pressures on expenditure and social and infrastructure spending need to be more cost effective At the same time tax bases need to broaden to reduce reliance on distortionary taxes on financial transactions and enterprise turnover and overall tax administration must be improved Finally and foremost the fiscal authorities need to keep public debt at sustainable levels paving the way for faster more resilient growth This volume discusses progress made to date in Argentina Brazil Chile and Mexico and points out the road ahead It provides an overview of trends and highlights the diversity of fiscal adjustment processes in Latin American countries It also describes the financial market perspective and role of sovereign debt ratings The chapter on Argentina debunks the view that fiscal management in the 1990s was irresponsible arguing instead that the financial crisis was caused by a confluence of costly pension reforms Brady debt restructuring and the recognition of fiscal skeletons in the closet The chapter on Brazil makes a case for a more entrenched culture of fiscal austerity to make the current achievements sustainable The Chile chapter describes the role of political cohesiveness following the return of democracy in driving the economy to fiscal rectitude Finally the chapter on Mexico discusses different scenarios for debt dynamics and the country's efforts to contain expenditure pressures

Influenza Virus Vaccines and Immunotherapies Arun Kumar, Shakti Singh, 2016-03-15 Influenza virus infections lead to thousands of deaths worldwide annually and billions of dollars economic burden Despite continuing advances in our understanding of the immune evasion mechanism the disease remains one of the foremost threat for human being Traditional vaccines attenuated and inactivated mainly provide protection by inducing virus neutralizing antibodies targeting ever changing surface antigens Haemagultinin HA and Neuraminidase NA Due to genetic shift and immune selection pressure prevalence of circulating influenza virus subtypes changes every year Therefore mismatch between circulating strain and vaccine strain can critically affect the success rate of these conventional flu vaccines and requires continuous monitoring of circulating influenza virus subtypes and change in the vaccine formulations

accordingly The collective limitations of existing flu vaccines urgently call for the development of a novel universal vaccines that might provide the required protective immunity to a range of influenza virus subtypes New approaches are being investigated mainly targeting conserved regions of flu proteins Some of these approaches include universally conserved epitopes of HA nucleoprotein NP capsid protein M1 and ion channel protein M2 that induced strong immune responses in animal models Some attention and progress appears to be focused on vaccines based on the M2 ectodomain M2e employing a variety of constructs adjuvants and delivery systems including M2e hepatitis B core antigen flagellin constructs and virus like particles VLP Animal studies with these M2e candidate vaccines demonstrated that these vaccine candidates can prevent severe illness and death but not infection which may pose difficulties in both the evaluation of clinical efficacy and approval by the regulatory authorities VLP vaccines appear to be promising but still are mostly limited to animal studies The discovery and development of new and improved vaccines have been greatly facilitated by the application of new technologies The use of nucleic acid based vaccines to combine the benefits of in situ expression of antigens with the safety of inactivated and subunit vaccines has been a key advancement Upon their discovery more than 20 years ago nucleic acid vaccines promised to be a safe and effective mean to mimic immunization with a live organism vaccine particularly for induction of T cell immunity In addition the manufacturing of nucleic acid based vaccines offered the potential to be relatively simple inexpensive and generic Reverse Vaccinology and in silico designing of vaccines are very innovative approaches and being considered as future of vaccines Furthermore various immuno therapeutic agents also being developed to treat and minimize immuno pathological damage in patients suffering from life threatening complications For the treatment of such pathological conditions various novel approaches such as administration of immune suppressive cytokines blocking co stimulatory signals or activating co inhibitory signal of T cell activation are being tested both in lab and clinics The Research Topic on influenza virus vaccine and therapeutics will give an insight in to the current status and future scope of these new innovative approaches and technologies Moreover these new methods will also serve as a reference tool for the development of future vaccines against several other pathogens *Molecular and Cellular Interactions Between the Host and Herpesviruses*

,2021-11-09 **Immune Correlates of Protection for Emerging Diseases - Lessons from Ebola and COVID-19** Javier Castillo-Olivares, Mike Whelan, Miles Carroll, William Dowling, 2024-04-08 Correlates of Protection CoP are biological parameters present in vaccinated or naturally infected individuals that predict levels of protection against an infectious disease CoP facilitate vaccine licensing since they enable a the selection of antigen composition of a vaccine b the assessment of vaccine efficacy in clinical trials without exposure of participants to natural infection and c bridging between first and second generation vaccines **The Genius of Mexico** Hubert Clinton Herring, Katharine Terrill, 1931

Challenges of Democracy Elmer John Ortman, 1968 *The Log*, 1951-07 **International Economic Trend Analysis** Howard G. Schaefer, 1995-04-18 The rise of large economic regions rivaling the United States will challenge its

competitive strength and ability to withstand cross border economic turbulence a challenge the U S has not faced in more than 50 years To meet this challenge American business leaders need a comprehensive understanding of the existing global economic and monetary system It is that plus an explanation of international economic trend analysis that Schaefer s book provides Based on key economic and financial indicators published weekly in The Economist Schaefer integrates a discussion of established international economic concepts with actual economic and financial data giving readers a system to evaluate current economic indicators and anticipate future trends An important resource for professionals and academics in international finance and investment and for corporate management operating on a global scale *IV International Conference on AIDS* ,1989

Novel Vaccination Strategies Stefan H. E. Kaufmann,2004-03-12 The protection mode of the majority of vaccines is based on the induction of antibody responses Since efficient immune responses to many pathogens rely on activating all arms of the immune system traditional vaccine development does not provide efficient protection against many diseases Novel vaccination strategies need to allow presentation of antigens that can activate the full array of the immune response and should prevent pathogen entry by mobilizing the local mucosal immune response New technological advances make it possible to optimize the immunogenicity of live and sub unit vaccines This book offers an interdisciplinary overview on research and future strategies for rational vaccine design based on recent developments in molecular biology and immunology It covers new aspects of the immunological interplay between prokaryotic and eukaryotic systems as well as achievements in the development of novel vaccine candidates Chapters on edible vaccines on vaccines against bioterror agents and on economical and safety aspects of novel vaccine development round off this title

Options for the Control of Influenza IV Albert Osterhaus,Nancy J. Cox,Alan W. Hampson,2001 This book presents the proceedings of the fourth International Conference on Options for the Control of Influenza that was organised by the European Scientific Working group on Influenza ESWI It provides a state of the art overview of virtually all aspects of influenza Epidemiology the scope of the influenza problem including public health economic and epidemiological aspects as well as surveillance and diagnostic methods Research fundamental and applied research topics related to the virus structure its replication and its control by the host immune system are addressed and Control strategies recent developments in vaccine and antiviral research and their impact on the control of the disease and its spreading
