Piper A Model Genus For Studies Of Phytochemistry Ecology And Evolution:

Piper: A Model Genus for Studies of Phytochemistry, Ecology, and Evolution Lee A. Dyer, Aparna Palmer, 2012-12-06 Piper is an economically and ecologically important genus of plant that includes a fascinating array of species for studying natural history natural products chemistry community ecology and evolutionary biology The diversification of this taxon is unique and of great importance in understanding the evolution of plants The diversity and ecological relevance of this genus makes it an obvious candidate for ecological and evolutionary studies but surprisingly most research on Piper spp to date has focused on the more economically important plants P nigrum black pepper P methysticum kava and P betle betel leaf While this book does address the applied techniques of studying Piper its focus is more on Piper in its natural setting Piper A Model Genus for Studies of Phytochemistry Ecology and Evolution synthesizes existing data and provides an outline for future investigations of the chemistry ecology and evolution of this taxon while examining its key themes of Piper as a model genus for ecological and evolutionary studies the important ecological roles of Piper species in lowland wet forests and the evolution of distinctive Piper attributes This volume has a place in the libraries of those studying or working in the fields of ecology evolutionary biology natural products chemistry invasive species biology pharmaceuticals and ethnobotany

Phyllostomid Bats Theodore H. Fleming, Liliana M. Dávalos, Marco A.R. Mello, 2020-10-16 With more than two hundred species distributed from California through Texas and across most of mainland Mexico Central and South America and islands in the Caribbean Sea the Phyllostomidae bat family American leaf nosed bats is one of the world s most diverse mammalian families From an insectivorous ancestor species living today over about 30 million years have evolved a hyper diverse range of diets from blood or small vertebrates to consuming nectar pollen and fruit Phyllostomid plant visiting species are responsible for pollinating more than five hundred species of neotropical shrubs trees vines and epiphytes many of which are economically and ecologically important and they also disperse the seeds of at least another five hundred plant species Fruit eating and seed dispersing members of this family thus play a crucial role in the regeneration of neotropical forests and the fruit eaters are among the most abundant mammals in these habitats Coauthored by leading experts in the field and synthesizing the latest advances in molecular biology and ecological methods Phyllostomid Bats is the first overview in more than forty years of the evolution of the many morphological behavioral physiological and ecological adaptations in this family Featuring abundant illustrations as well as details on the current conservation status of phyllostomid species it is both a comprehensive reference for these ecologically vital creatures and a fascinating exploration of the evolutionary process of adaptive radiation

Handbook of Spices in India: 75 Years of Research and Development P N Ravindran, K Sivaraman, S Devasahayam, K Nirmal Babu, 2024-06-24 This compendium presents comprehensive information on more than 25 important spice crops commercially grown in India and traded globally apart from over 40 spices that have the potential to be popularized In 70 chapters the book covers the achievements in research and development made in India for

the past 75 years in various organizations including research institutes agricultural universities and private sector laboratories Spices are natural products of plant origin used primarily for flavouring and seasoning or for adding pungency and flavour to foods and beverages The flavour and fragrance of Indian spices had a magic spell on human culture since very ancient days The importance of spices in Indian life and its contribution to the economy are substantial India as the world's leading producer of spices is also a significant stakeholder in spices export trade globally Indian spices being sources of many high value compounds are also gaining much importance for other diversified uses especially for their pharmaceutical and nutraceutical properties A wide variety of 52 spices are grown in India including black pepper chillies cardamom ginger turmeric cinnamon nutmeg garlic onion cumin coriander saffron and vanilla This book compiles a comprehensive holistic review on the subject written by the best experts in the field in India representing diverse agencies This book is a single point reference book for all those involved in the research study teaching and use of spices in India and abroad

The Ecology of Plant Chemistry and How It Drives Multi-Species Interactions Massuo J. Kato, Tara J. Massad, Mariana A. Stanton, Daniel G. Vassão, Lydia F. Yamaguchi, 2019-11-28

Tropical Forest Community Ecology Walter Carson, Stefan Schnitzer, 2011-08-31 Historically tropical ecology has been a science often content with descriptive and demographic approaches which is understandable given the difficulty of studying these ecosystems and the need for basic demographic information Nonetheless over the last several years tropical ecologists have begun to test more sophisticated ecological theory and are now beginning to address a broad array of questions that are of particular importance to tropical systems and ecology in general Why are there are so many species in tropical forests and what mechanisms are responsible for the maintenance of that vast species diversity What factors control species coexistence Are there common patterns of species abundance and distribution across broad geographic scales What is the role of trophic interactions in these complex ecosystems How can these fragile ecosystems be conserved Containing contributions from some of the world's leading tropical ecologists Tropical Forest Community Ecology provides a summary of the key issues in the discipline of tropical ecology Includes contributions from some of the world's leading tropical ecologists Covers patterns of species distribution the maintenance of species diversity the community ecology of tropical animals forest regeneration and conservation of tropical ecosystems

The Ornaments of Life Theodore H. Fleming, W. John Kress, 2013-10-03 The average kilometer of tropical rainforest is teeming with life it contains thousands of species of plants and animals As The Ornaments of Life reveals many of the most colorful and eye catching rainforest inhabitants toucans monkeys leaf nosed bats and hummingbirds to name a few are an important component of the infrastructure that supports life in the forest These fruit and nectar eating birds and mammals pollinate the flowers and disperse the seeds of hundreds of tropical plants and unlike temperate communities much of this greenery relies exclusively on animals for reproduction Synthesizing recent research by ecologists and evolutionary biologists Theodore H Fleming and W John Kress demonstrate the tremendous functional and

evolutionary importance of these tropical pollinators and frugivores They shed light on how these mutually symbiotic relationships evolved and lay out the current conservation status of these essential species In order to illustrate the striking beauty of these ornaments of the rainforest the authors have included a series of breathtaking color plates and full color graphs and diagrams *Essential Oils* Valdir Florêncio da Veiga Jr.,Isiaka Ajani Ogunwande,José L. Martinez,2023-12-01

Essential oils well known for their remarkable properties have played a ubiquitous role throughout human history They connect us to our past invoking memories of childhood places and the aromas of our grandparents kitchens From the fragrant scents of ancient Egypt to the natural preservatives found in 15th century Oriental spices essential oils have the ability to stimulate numb and captivate our senses through their effects on the central nervous system This book presents several innovative studies on the isolation biological and pharmacological properties of essential oils conducted by multidisciplinary groups from different countries Mutualisms and Insect Conservation Tim R. New,2017-07-10

Documenting and understanding intricate ecological interactions involving insects is a central need in conservation and the specialised and specific nature of many such associations is displayed in this book Their importance is exemplified in a broad global overview of a major category of interactions mutualisms in which the interdependence of species is essential for their mutual wellbeing The subtleties that sustain many mutualistic relationships are still poorly understood by ecologists and conservation managers alike Examples from many parts of the world and ecological regimes demonstrate the variety of mutualisms between insect taxa and between insects and plants in particular and their significance in planning and undertaking insect conservation of both individual species and the wider contexts on which they depend Several taxonomic groups notably ants lycaenid butterflies and sucking bugs help to demonstrate the evolution and flexibility of mutualistic interactions whilst fundamental processes such as pollination emphasise the central roles of often highly specific partnerships This compilation brings together a wide range of relevant cases and contexts with implications for practical insect conservation and increasing awareness of the roles of co adaptations of behaviour and ecology as adjuncts to designing optimal conservation plans The three major themes deal with the meanings and mechanisms of mutualisms the classic mutualisms that involve insect partners and the environmental and conservation lessons that flow from these and have potential to facilitate and improve insect conservation practice The broader ecological perspective advances the transition from primary focus on single species toward consequently enhancing wider ecological contexts in which insect diversity can thrive **Medicinal Spices and Vegetables from Africa** Victor Kuete,2017-01-14

Medicinal Spices and Vegetables from Africa Therapeutic Potential against Metabolic Inflammatory Infectious and Systemic Diseases provides a detailed look at medicinal spices and vegetables that have proven safe and effective for consumption and the treatment of diseases including infectious diseases cardiovascular disease and cancer It provides pharmacological evidence such as the latest information related to efficacy and safety data in vitro and in vivo studies clinical trials and more to illustrate the use of

these spices and vegetables as both palliative and alternative treatments with the goal of furthering research in this area to produce safer and more effective drugs Provides scientific evidence for the potential of medicinal spices and vegetables used in Africa to fight metabolic inflammatory and infectious diseases Includes a review of the latest methods used to investigate the effects of medicinal plants in the treatment of disease Offers an updated resource for students and scientists in the fields of pharmaceutical science pharmacognosy complementary and alternative medicine ethnopharmacology phytochemistry biochemistry and more Seed Dispersal by Bats in the Neotropics Tatyana A. Lobova, Cullen K. Geiselman, Scott A.

Mori, 2009 This book provides a comprehensive treatment of all known bat dispersed plants in the New World tropics and covers a total of 549 species in 191 genera from 62 plant families It places a special emphasis on the flowering plants and bat fauna of the relatively undisturbed forests of central French Guiana In particular detailed descriptions of 112 bat dispersed species from that area are complemented by color photographs that will help other researchers identify fruits and seeds throughout the Neotropics Going beyond merely describing these species the authors compare and analyze the diverse traits of plants dispersed by bats to reexamine bat preferences of some fruiting plants over the others a phenomenon known as the bat fruit syndrome The seed dispersers too are given ample treatment with descriptions of the foraging ecology and feeding behaviors of the 37 fruit eating bats found in central French Guiana The monograph includes complementing appendices that allow the reader to determine all bat species reported to feed on the fruits of a particular plant and all fruiting plants in the diet of a particular bat species It summarizes decades of research on bat plant interactions from many parts of the Neotropics providing a stimulus for further ecological and evolutionary studies **Medicinal Plant Biotechnology, 2**

Volume Set Oliver Kayser, Wim J. Quax, 2007 This unique overview of plants and transgenic techniques of great scientific medicinal and economic value for both industry and academia covers the whole spectrum from cell culture techniques via genetic engineering and secondary product metabolism right up to the use of transgenic plants for the production of bioactive compounds Practical examples are given throughout including the production of cancer therapeutics functional food and flavor compounds in plants Of particular interest to the pharmaceutical and biotechnological industries as well as medicinal chemists biochemists and molecular biologists **The British National Bibliography** Arthur James Wells, 2004
