Goyal,2025-04-15 Cold plasma technology in the food industry is increasingly being adopted for its effective decontamination of food from foodborne pathogens and for its ability for enhanced pest mitigation in stored products This new volume explores the techniques and methods of processing food products without subjecting them to heat treatment using the promising cutting edge technology of cold plasma for food preservation and food safety The book discusses the design and generation of cold plasma along with the interaction with food molecules and covers applications in agri food systems such as in solid foods liquid foods and food packaging It presents the effects of cold plasma on starch modification food surface modification and its influence on toxin reduction It also reports on advances and research being conducted to deal with simulation modeling and emerging other combination technologies A chapter also reports on adopting cold plasma for spaceflight grown produce **Molecular and Computational Modeling of Cardiac Function** Thomas Jue,2025-01-07 In Molecular and Computational Modeling of Cardiac Function a group of prominent professors and researchers explain the fundamental concepts of molecular modeling and illustrate the biomedical applications The book covers the following topics Principles of atomistic modeling and simulation of biomolecular systems Using atomistic modeling to predict the cardiotoxicity of an arrhythmia drug molecule Bifurcation phenomena in cardiac system as control design of automaticity and arrhythmia Modeling the role of myoglobin as a fatty acid transporter Population based computational approaches to investigate cardiac arrhythmia South African Journal of Chemistry ,1992 Supercomputer Research in Chemistry and Chemical Engineering Klavs F. Tsagaraki,2017-11-16 In oligotrophic environments dust and nutrient inputs via atmospheric routes are considered important sources of macro nutrients and micro trace metals fuelling primary and secondary production Yet the impact of these dust inputs on the microbial populations is not fully investigated in the Eastern Mediterranean Sea EMS The response of oligotrophic systems to dust inputs whether as positive or negative feedbacks to autotrophic and heterotrophic production and thus to biogeochemical cycling is important to examine further Experimental studies have explored nutrient additions in various combinations to determine the limiting resource to productivity or N₂ fixation Recent experimental studies have applied dust enrichments to bottle or mesocosm incubations of seawater from different oceanic regions This research topic presents two Eastern Mediterranean dust addition mesocosm experiments using for the first time real aerosol additions pure Saharan dust

and mixed aerosols a natural mixture of desert dust and polluted European particles as well as other EMS aerosol experimental studies The Topic includes manuscripts introducing results on a the impact of Saharan dust vs mixed aerosols on the autotrophic and heterotrophic surface microbial populations in the EMS b the impact of single vs multi pulses of Saharan dust introduction into the pelagic environment of the EMS and c other experimental studies of aerosol impacts on the EMS ecosystem
