Places and Valuations in Noncommutative Ring Theory Jan Van Geel, 1981 **Non-Commutative Valuation Rings and Semi-Hereditary Orders** H. Marubayashi, Haruo Miyamoto, Akira Ueda, 2013-03-09 Much progress has been made during the last decade on the subjects of non commutative valuation rings and of semi hereditary and Priifer orders in a simple Artinian ring which are considered in a sense as global theories of non commutative valuation rings So it is worth to present a survey of the subjects in a self contained way which is the purpose of this book Historically non commutative valuation rings of division rings were first treated systematically in Schilling's Book Sc which are nowadays called invariant valuation rings though invariant valuation rings can be traced back to Hasse's work in Has Since then various attempts have been made to study the ideal theory of orders in finite dimensional algebras over fields and to describe the Brauer groups of fields by usage of valuations places preplaces value functions and pseudoplaces In 1984 N 1 Dubrovin defined non commutative valuation rings of simple Artinian rings with notion of places in the category of simple Artinian rings and obtained significant results on non commutative valuation rings named Dubrovin valuation rings after him which signify that these rings may be the correct definition of valuation rings of simple Artinian rings Dubrovin valuation rings of central simple algebras over fields are however not necessarily to be integral over their centers **Places and Valuations in Noncommutative Ring Theory** Jan V. Geel, 1981 **Modules over Valuation Rings** László Fuchs, Luigi Salce, 1985-03-27 This book initiates a systematic in depth study of Modules Over Valuation Domains It introduces the theory of modules over commutative domains without finiteness conditions and examines frontiers of current research in modules over valuation domains It represents a unique effort to combine ideas from abelian group theory in a large scale with powerful techniques developed in module theory This volume surveys the background material on valuation rings modules and homological algebra features new results for important classes of modules such as finitely generated divisible pure injective and projective dimension one never published before contains exercises and research problems offering guidance for independent and creative study and provides historical notes comments and an extensive bibliography Mathematicians and advanced graduate level mathematics students interested in module theory abelian group theory and commutative ring theory can stay abreast of the latest advances with Modules Over Valuation Domains Book jacket **Boundary Value Problems and Integral Equations in Nonsmooth Domains** Martin Costabel, Monique Dauge, Serge Nicaise, 1994-10-25 Based on the International Conference on Boundary Value Problems and Integral Equations In Nonsmooth Domains held recently in Luminy France this work contains strongly interrelated refereed papers that detail the latest findings in the fields of nonsmooth domains and corner singularities Two dimensional polygonal or Lipschitz domains three dimensional polyhedral corners and edges and conical points in any dimension are examined **Least Squares Computations Using Orthogonalization Methods** James W. Regressive sets and the theory of isols brings together in a single convenient source a substantial representative sampling of available recursion theoretic and algebraic material on isols and offers several recent theorems about regressive sets and isols that have not been published elsewhere The only systematic comprehensive treatment specifically on isol theory this important volume focuses initially on the recursion theoretic properties of the sets belonging to an isol details the algebra of isols building gradually from ad hoc constructions through an increasingly potent hierarchy of metatheorems
