Plague Of Rats Rubbervines The Growing:

A Plague of Rats and Rubbervines Yvonne Baskin, 2013-04-15 The human love of novelty and desire to make one place look like another coupled with massive increases in global trade and transport are creating a growing economic and ecological threat The same forces that are rapidly McDonaldizing the world s diverse cultures are also driving us toward an era of monotonous weedy and uniformly impoverished landscapes Unique plant and animal communities are slowly succumbing to the world s rats and rubbervines animals like zebra mussels and feral pigs and plants like kudzu and water hyacinth that once moved into new territory can disrupt human enterprise and well being as well as native habitats and biodiversity From songbird eating snakes in Guam to cheatgrass in the Great Plains invasives are wreaking havoc around the world In *A Plague of Rats and Rubbervines* widely published science writer Yvonne Baskin draws on extensive research to provide an engaging and authoritative overview of the problem of harmful invasive alien species She takes the reader on a worldwide tour of grasslands gardens waterways and forests describing the troubles caused by exotic organisms that run amok in new settings and examining how commerce and travel on an increasingly connected planet are exacerbating this oldest of human created problems She offers examples of potential solutions and profiles dedicated individuals worldwide who are working tirelessly to protect the places and creatures they love While our attention is quick to focus on purposeful attempts to disrupt our lives and economies by releasing harmful biological agents we often ignore equally serious but much more insidious threats those that we inadvertently cause by our own seemingly harmless actions *A Plague of Rats and Rubbervines* takes a compelling look at this underappreciated problem and sets forth positive suggestions for what we as consumers gardeners travelers nurserymen fishermen pet owners business people indeed all of us who by our very local choices drive global commerce can do to help

A Plague of Rats and Rubbervines Yvonne Baskin, 2003-11-01 Explores the issue of bioinvasions covering the extent and consequences of human rearrangement of the Earth s species and the search for solutions

Farming and the Fate of Wild Nature Daniel Imhoff, Jo Ann Baumgartner, 2012-07-16 Farming and the Fate of Wild Nature addresses an urgent and complex issue facing communities and cultures throughout the world the need for heightened land stewardship and conservation in an era of diminishing natural resources Agricultural lands in rural areas are being purchased for development Water scarcities are pitting urban and development expansion against agriculture and conservation needs The farming population is ageing and retiring while those who remain struggle against low commodity prices international competition rising production costs and the threat of disappearing subsidies We are living amidst a major extinction crisis much of it driven by agriculture as well as an increasing shift toward a global urban populace The modern diet driven by a grain fed livestock industry is no longer connected with the ecosystems that support it In international circles experts are arguing that further intensification of agriculture through industrialization and genetic modification will be necessary to both feed an exploding human population and to save what is left of wild biodiversity This book takes up

where its predecessor the award winning *Farming with the Wild* left off Featuring a wide range of in depth essays articles and other materials by such authors as Aldo Leopold Wendell Berry Michael Pollan Fred Kirschenmann and Daniel Imhoff this book persuasively demonstrates that farm and ranch operations which coexist with wild nature are necessary to sustain biodiversity and beauty on the landscape In fact as this invaluable educational resource demonstrates they are essential in the challenge of building sane healthy and hopeful human societies

Humans Versus Nature Daniel R. Headrick, 2020 Since the appearance of *Homo sapiens* on the planet hundreds of thousands of years ago human beings have sought to exploit their environments extracting as many resources as their technological ingenuity has allowed As technologies have advanced in recent centuries that impulse has remained largely unchecked exponentially accelerating the human impact on the environment *Humans versus Nature* tells a history of the global environment from the Stone Age to the present emphasizing the adversarial relationship between the human and natural worlds Nature is cast as an active protagonist rather than a mere backdrop or victim of human malfeasance Daniel R Headrick shows how environmental changes epidemics climate shocks and volcanic eruptions have molded human societies and cultures sometimes overwhelming them At the same time he traces the history of anthropogenic changes in the environment species extinctions global warming deforestation and resource depletion back to the age of hunters and gatherers and the first farmers and herders He shows how human interventions such as irrigation systems over fishing and the Industrial Revolution have in turn harmed the very societies that initiated them Throughout Headrick examines how human driven environmental changes are interwoven with larger global systems dramatically reshaping the complex relationship between people and the natural world In doing so he roots the current environmental crisis in the deep past

Species Cleansing Gabriela Jarzębowska, 2024-09-09 The book scrutinizes post war rat control programs in Poland exploring their intricate intersections with politics science and ideology It delves into the impact of prevailing cultural narratives concerning problematic urban rodents on pest control and sanitary programs as well as the ways in which biological factors shape challenge or impede political modernization initiatives Employing urban rat populations as an unequivocal exemplar of an undesirable element the author constructs an inquiry into the strategies of political exclusion The analysis of rat extermination schemes facilitates an exploration of the patterns of social progress within a semi peripheral country and the discursive shifts evident in political language regarding the troublesome non human urban residents

Invasive and Introduced Plants and Animals Ian D. Rotherham, Robert A. Lambert, 2012-12-06 There have been many well publicized cases of invasive species of plants and animals often introduced unintentionally but sometimes on purpose causing widespread ecological havoc Examples of such alien invasions include pernicious weeds such as Japanese knotweed an introduced garden ornamental which can grow through concrete the water hyacinth which has choked tropical waterways and many introduced animals which have out competed and displaced local fauna This book addresses the broader context of invasive and exotic species in terms of the perceived threats and

environmental concerns which surround alien species and ecological invasions As a result of unprecedented scales of environmental change combined with rapid globalisation the mixing of cultures and diversity and fears over biosecurity and bioterrorism the known impacts of particular invasions have been catastrophic However as several chapters show reactions to some exotic species and the justifications for interventions in certain situations including biological control by introduced natural enemies rest uncomfortably with social reactions to ethnic cleansing and persecution perpetrated across the globe The role of democracy in deciding and determining environmental policy is another emerging issue In an increasingly multicultural society this raises huge questions of ethics and choice At the same time in order to redress major ecological losses the science of reintroduction of native species has also come to the fore and is widely accepted by many in nature conservation However with questions of where and when and with what species or even species analogues reintroductions are acceptable the topic is hotly debated Again it is shown that many decisions are based on values and perceptions rather than objective science Including a wide range of case studies from around the world his book raises critical issues to stimulate a much wider debate *Park Science* ,2000 *The Public Garden* ,2001 *The Publishers Weekly* ,2003
