International Conflict and Cyberspace Superiority William D. Bryant,2015-07-30 This book examines cyberspace superiority in nation state conflict from both a theoretical and a practical perspective This volume analyses superiority concepts from the domains of land maritime and air to build a model that can be applied to cyberspace Eight different cyberspace conflicts between nation states are examined and the resulting analysis is combined with theoretical concepts to present the reader with a conclusion Case studies include the conflict between Russia and Estonia 2007 North Korea and the US and South Korea 2009 and Saudi Arabia and Iran in the Aramco attack 2012 The book uses these case studies to examine cyberspace superiority as an analytical framework to understand conflict in this domain between nation states Furthermore the book makes the important distinction between local and universal domain superiority and presents a unique model to relate this superiority in all domains as well as a more detailed model of local superiority in cyberspace Through examining the eight case studies the book develops a rigorous system to measure the amount of cyberspace superiority achieved by a combatant in a conflict and seeks to reveal if cyberspace superiority proves to be a significant advantage for military operations at the tactical operational and strategic levels This book will be of much interest to students of cyber conflict strategic studies national security foreign policy and IR in general U.S. Air Services ,1950 **Picture History of Aviation on Long Island, 1908-1938** George C. Pattillo, 1998 Pushing the Envelope a survey history of the American aircraft now aerospace manufacturing industry is the most comprehensive history on the subject ever completed Though it covers the development of the industry from the beginnings of flight to the present it provides far more than a simple chronology by analyzing key economic military technical and international influences on the industry and showing how the industry has been instrumental in American military and technological leadership from its modest beginnings Using original sources whenever available Pushing the Envelope focuses on the business of aircraft It is neither an aeronautical nor a production history of the industry although both aspects are addressed Instead Donald M Pattillo features the development and production of aircraft in different periods in the context of aeronautical progress Pushing the Envelope also establishes that the central fact of the industry s existence its dependence on military contracts has been simultaneously its greatest strength and greatest vulnerability Even during periods of military expansion Pattillo illustrates it has always been an unstable and insecure enterprise Carefully researched Pushing the

Envelope also assesses the environmental impacts on the industry including those pressures that have often led it into ethical dispute Unlike any other technological industry the unique qualities of the aircraft industry are truly paradoxical although it provides vital technical and production capability to the nation demand for its capabilities may be influenced by external developments that it cannot foresee or influence Pushing the Envelope transcends narrow disciplines commingling aeronautical science and technology business management international business the history of science and technology national security studies and international relations Written in nontechnical language it can easily be understood by a diverse audience including industry and military professionals as well as the general public interested in aviation and technology With Pushing the Envelope Pattillo fills a most conspicuous gap in the literature of both aviation and industrial history Donald M Pattillo is an educational consultant in Acworth Georgia Current History & Forum ,1940 **Current History** ,1940
