

the secrets of metals

Our world was once so dominated by metals that historic eras were named for them—Copper Age, Bronze Age, Iron Age. Today we are likely to have to look twice to see the metals that surround and support our modern life. While the achievements of chemistry and physics seem to have revealed everything about the nature of metals, in this concise and direct analysis, Wilhelm Pelikan shows that the world of metals is still full of mystery.

Moving from their obvious properties, which caused them to be utilized as tools, the author leads us through an investigation of each metal into the "cosmic aspects of the metallic nature." Lead, tin, iron, gold, copper, quicksilver, zinc, and aluminum are given careful attention.

In an effort to regain an understanding of the correlation between metals and our inner organs that has been known since ancient times, Pelikan traces the distribution of each metal over the earth. He shows what each metal means for plants and animals, as well as their specific significance for human beings, for example, how lead is connected to consciousness.

From the engineer and the artist, who must incorporate these materials into their work, to the physician and the educator, who seek an understanding of their impact on patients and students, including the radiation effect of metals, there is ample material here for all.
