Polymer Dispersions And Their Industrial Applications:

Polymer Dispersions and Their Industrial Applications Dieter Urban, Koichi Takamura, 2002 Aqueous polymer dispersions are environmentally friendly and therefore they have replaced in many applications polymers dissolved in organic solvents This substitution process is still ongoing This book discusses the world of aqueous polymer dispersions from the viewpoint of how they are applied For a better understanding it starts with a general description of the synthesis of polymer dispersions and their characterization The following chapters are dedicated to a wide variety of applications including history modern processes and typical formulations and performance The selection and the usage of a polymer dispersion are not uniform around the world because of historical and regional differences of the technical developments and marketing demands Leading scientists from industry contributed to this book ensuring that practical issues are emphasized

Polymer Science: A Comprehensive Reference, 2012-12-05 The progress in polymer science is revealed in the chapters of Polymer Science A Comprehensive Reference Ten Volume Set In Volume 1 this is reflected in the improved understanding of the properties of polymers in solution in bulk and in confined situations such as in thin films Volume 2 addresses new characterization techniques such as high resolution optical microscopy scanning probe microscopy and other procedures for surface and interface characterization Volume 3 presents the great progress achieved in precise synthetic polymerization techniques for vinyl monomers to control macromolecular architecture the development of metallocene and post metallocene catalysis for olefin polymerization new ionic polymerization procedures and atom transfer radical polymerization nitroxide mediated polymerization and reversible addition fragmentation chain transfer systems as the most often used controlled living radical polymerization methods Volume 4 is devoted to kinetics mechanisms and applications of ring opening polymerization of heterocyclic monomers and cycloolefins ROMP as well as to various less common polymerization techniques Polycondensation and non chain polymerizations including dendrimer synthesis and various click procedures are covered in Volume 5 Volume 6 focuses on several aspects of controlled macromolecular architectures and soft nano objects including hybrids and bioconjugates Many of the achievements would have not been possible without new characterization techniques like AFM that allowed direct imaging of single molecules and nano objects with a precision available only recently An entirely new aspect in polymer science is based on the combination of bottom up methods such as polymer synthesis and molecularly programmed self assembly with top down structuring such as lithography and surface templating as presented in Volume 7 It encompasses polymer and nanoparticle assembly in bulk and under confined conditions or influenced by an external field including thin films inorganic organic hybrids or nanofibers Volume 8 expands these concepts focusing on applications in advanced technologies e g in electronic industry and centers on combination with top down approach and functional properties like conductivity Another type of functionality that is of rapidly increasing importance in polymer science is introduced in volume 9 It deals with various aspects of polymers in biology and medicine

including the response of living cells and tissue to the contact with biofunctional particles and surfaces The last volume is devoted to the scope and potential provided by environmentally benign and green polymers as well as energy related polymers They discuss new technologies needed for a sustainable economy in our world of limited resources Provides broad and in depth coverage of all aspects of polymer science from synthesis polymerization properties and characterization methods and techniques to nanostructures sustainability and energy and biomedical uses of polymers Provides a definitive source for those entering or researching in this area by integrating the multidisciplinary aspects of the science into one unique up to date reference work Electronic version has complete cross referencing and multi media components Volume editors are world experts in their field including a Nobel Prize winner

Latex and Synthetic Polymer Dispersions 2013
 Smithers Rapra, 2013-11-13 The 8th Smithers Rapra conference on Latex and Synthetic Polymer Dispersions gave a very broad picture of the industry These proceedings cover all the presentations from the two day event which included The scientific principles underlying latex dipping were described by Professor C C Ho and Dr Aik Hwee Eng of Ansell spoke about a modern result of dipping the antimicrobial glove Very interesting observations about the allergenic potential of synthetic latex gloves compared to those dipped from natural rubber were made by Hardi Tamm of Korymbos The use of gamma radiation from the very start of the process as a means of prevulcanization to the end of the production process in sterilization was described by Dr Rosamma Alex of the Rubber Research Institute of India and Eric Beers of Nordion respectively The versatility of natural latex was demonstrated in a paper by Dr Azura of Universiti Sains Malaysia who showed us how it can be used for the cleaning of compression moulds Innovative polymer synthesis in the manufacture of latex dispersions was presented by Dr Joachim Storsberg of the Fraunhofer Institute and Dr Soeren Butz of Synthomer told how more clever chemistry could be used to e tailor makee pressure sensitive adhesives The environmental side of the industry was not forgotten with two presentations from the Malaysian Rubber Board Muhammad D Syraarani describing an environmentally friendly method for the analysis of magnesium in latex and Dr Devaraj Veerasamy presenting the use of ultrafiltration to process latex In a similar vein Prof Khairah Haji Badri of the Universiti Tun Abdul Rahman showed how natural resources such as palm oil can be used to create useful polymers David Hill of David Hill and Associates described how to carry out Process Validation of dipped condoms and gloves and the delegates were told how the newest latex for dipping synthetic polyisoprene compares with the oldest natural rubber by Dr Bert Krutzer of Kraton The conference ended with Dr Siby Varghese of the Rubber Research Institute of India and Prof Sabu Thomas of the Mahatma Gandhi University describing recent advances and applications in the field of nanotechnology

Chemistry and Technology of Emulsion Polymerisation
 A. M. van Herk, 2008-04-15 Emulsion polymerisation produces high value polymers in a low cost environmentally friendly process The drive to develop environmentally benign production methods for polymers has resulted in widespread development and implementation of the emulsion polymerisation technique In addition when combined with

novel polymerisation mechanisms the process can give rise to a range of polymer products with particularly useful properties Emulsion polymerisation is a complex process governed by the interplay of both chemical and physical properties including polymerisation kinetics and dispersion stability Successful industrial application relies on understanding and controlling those properties By carefully explaining the principles of the reaction based on well designed experimental investigation Chemistry and Technology of Emulsion Polymerisation provides a practical and intuitive explanation of emulsion polymerisation In the development of industrial processes coupling that understanding with everyday practice can be a further difficult step so the book emphasises a clear comprehensive and straightforward discussion to illustrate how the principles relate to practical application Written for research chemists technologists and engineers in the polymer fine and specialty chemicals industries and in university or government laboratories this book will be particularly valuable to those early on in their careers The comprehensive and straightforward coverage will also ensure it is an important resource for advanced courses in emulsion polymerisation

Polymer Reaction Engineering Jose Asua, 2008-04-15 Polymers are an example of products by process where the final product properties are mostly determined during manufacture in the reactor An understanding of processes occurring in the polymerization reactor is therefore crucial to achieving efficient consistent safe and environmentally friendly production of polymeric materials Polymer Reaction Engineering provides the link between the fundamentals of polymerization kinetics and polymer microstructure achieved in the reactor Organized according to the type of polymerization each chapter starts with a description of the main polymers produced by the particular method their key microstructural features and their applications Polymerization kinetics and its effect on reactor configuration mass and energy balances and scale up are covered in detail The text is illustrated with examples emphasizing general concepts principles and methodology Written as an authoritative guide for chemists and chemical engineers in industry and academe Polymer Reaction Engineering will also be a key reference source for advanced courses in polymer chemistry and technology

Advanced Polymer Nanoparticles Vikas Mittal, 2010-07-13 Polymer nanoparticles are an important class of polymeric materials that are required for a number of commercial applications This book presents the tremendous developments in the synthesis and surface modification techniques to generate advanced polymer nanoparticles After a brief introduction to polymer latex technology the text discusses emulsion polymerization miniemulsion polymerization as well as batch semi batch and continuous polymerization It then details the synthesis and surface modification of various types of polymer nanoparticles including polymers with core shell morphologies dendrimers modified polymer nanoparticles and porous and hollow polymer nanoparticles

Heterophase Polymerization Hugo Hernandez, Klaus Tauer, 2021-04-04 Heterophase polymerization is a century old technology with a wide range of relevant industrial applications including coatings adhesives rubbers and many other specialized biomedical and high performance materials However due to its multiscale complexity it still remains a challenging research topic It is a broad field covering all heterogeneous polymerization processes that result

in polymer dispersions Its technical realizations comprise emulsion polymerization dispersion polymerization suspension polymerization miniemulsion polymerization microemulsion polymerization and others This book is devoted to the science and technology of heterophase polymerization considering it a generic term as well as an umbrella expression for all of its technical realizations It presents from a modern perspective the basic concepts and principles required to understand the kinetics and thermodynamics of heterophase polymerization at the atomistic molecular macromolecular supramolecular colloidal microscopic mesoscopic and macroscopic scales It critically discusses the important physicochemical mechanisms involved in heterophase polymerization such as nucleation particle aggregation mass transfer swelling spontaneous emulsification and polymerization kinetics along with the experimental evidences at hand Chemistry and Industry ,2007

Eliseeva,1981-12-31 There is a large body of Soviet work on emulsion polymerization spanning a period of over three decades that has been published primarily in the Russian language Most of this has remained untranslated into English and hence un available to most other scientists The value of this book lies primarily in the fact that it brings together the most important of these Soviet contributions along with comment and analysis by the authors who may be considered among the foremost authorities in this field in the Soviet Union But the hundreds of literature citations go far beyond the borders of the Soviet Union and serve as an excellent bibliography of the world literature on emulsion polymerization up to the time this book was written The book covers both fundamental and applied aspects In the former are included discussions of particle formation mechanisms a comprehensive theory of emulsion polymerization copolymerization of polar monomers and particle morphology and its implications with regard to derived film properties Among the applied aspects are discussions of continuous emulsion polymerization both tubular reactors and continuous stirred tank cascades and various aspects concerning the manufacture of some of the most important monomers such as styrene butadiene vinyl acetate methyl methacrylate acrylonitrile and chloroprene This book will be an indispensable reference source for scientists who are entering the field as well as those who are experienced and who have wanted a ready access to this large body of literature
