Solid Waste Management Garima Chauhan,Surajbhan Sevda,2023-12-01 Waste is generally identified as goods or material that are perceived to be mostly valueless However objects that are perceived to be waste based on consumers object valuation can be redefined to create value This requires a multitude of efforts using different strategies in waste prevention and management This book is an edited collection of various chemical approaches used for valorization of solid wastes particularly waste electrical and electronic equipment plastic waste and agro residue waste that provide research insights into the concept waste to energy Covering a variety of interdisciplinary topics on waste treatment and resource recovery makes the book one for all that serves as an excellent reading material for engineers science scholars entrepreneurs and organizations who are working in the field of waste management

Magnesium--science, Technology and Applications Wei Ke,2005 Magnesium with its very rich reserves within the Earth is an important engineering material but has not yet been fully developed and utilized Given its low density magnesium has a higher specific strength and stiffness than many other engineering materials including aluminum steel and polymer based composites Magnesium also offers other attractive properties such as a high damping capacity electromagnetic shielding dimensional stability and good machinability and recyclability As a relatively

new structural material magnesium and its alloys have demonstrated a significant potential for applications in many industries including automobile 3C computer communication and consumer products transportation power tools equipment and new energy sources *Frontiers in the Science and Technology of Polymer Recycling* Güneri Akovali, Carlos A.

Bernardo, Jacob Leidner, L.A. Utracki, Marino Xanthos, 2013-03-09 Polymers main components of plastics and rubbers are being discarded in increasing quantities But this waste can also be considered as plastic gold Public concern coupled with the inherent value of the material means that recycling is imperative The present book presents a survey of current knowledge in the form of case studies including current legal and educational issues Topics covered also include regulation and practice in NATO countries the economics of recycling the reprocessing of single polymers and mixtures and future prospects and strategies Audience Vital reading for all polymer scientists technicians and engineers **Conference**

Proceedings Society of Plastics Engineers. Technical Conference, 1983 *Agglomeration Processes* Wolfgang Pietsch, 2002 Agglomeration is integral to the processes of modification of powders production of composites and creation of new materials which are required in pharmaceuticals foods chemicals fertilizers and agrochemicals minerals ceramics metallurgy and all material producing industries The binding mechanisms and the particle behavior as well as the characteristics of the processes and the resulting agglomerates are the same whether they are occurring in the ultra clean pharmaceutical or food industries or in dirty minerals or waste processing plants The book introduces the interdisciplinary approach to the development of new concepts and the solution of problems It is a complete and up to date practical guide describing the various agglomeration phenomena and industrial techniques for size enlargement In addition to introducing the properties of agglomerates and the characteristics of the different methods descriptions of the machinery and discussions of specific equipment features are the main topics The detailed evaluation of the subject is based on the authors experience as student researcher teacher developer designer vendor and user as well as expert and consultant in the field of agglomeration its technologies and products and is complemented by the know how of colleagues who are active in specific areas and information from vendors It is intended for everybody working in industries that process and handle particulate solids as it aims to help understand and control unwanted agglomeration as well as use improve and develop methods for the beneficial size enlargement by agglomeration Recycling and Reuse of Waste Materials Ravindra K.
