Handbook of Vibrational Spectroscopy John M. Chalmers, Peter R. Griffiths, 2002 **Polymers for Advanced Technologies** Menachem Lewin, 1988 Leading Edge Research in Solar Energy Patrick N. Rivers, 2007 Solar energy can be divided into direct and indirect categories Most energy sources on Earth are forms of indirect solar energy Coal oil and natural gas derive from ancient biological material which took its energy from the sun via plant photosynthesis millions of years ago All the energy in wood and foodstuffs also comes from the sun Movement of the wind which causes waves at sea and the evaporation of water to form rainfall which accumulates in rivers and lakes are also powered by the sun Therefore hydroelectric power and wind and wave power are forms of indirect solar energy Solar energy research and applications have been receiving increasing attention throughout the world as solar energy must play a much greater role in the energy mix in upcoming years This book examines new research in this frontier field *Report on Route to Scale-up of Polymer Based PV* Adam J. Moule, California Solar Energy Collaborative, University of California, Davis, 2012 *Mechanisms of Photophysical Processes and Photochemical Reactions in Polymers* J. F. Rabek, 1987 During the last two decades photophysical and photochemical processes have become important in many branches of polymer chemistry The author uses such advances to illustrate his systematic description of mechanisms for the most important photoreactions and presents a review of the field
