**Influence of Residual Stresses on Random Fatigue Life, in Bending, of Notched 7075 Aluminum Specimens** R. A. Heller, M. Seki, A. M. Freudenthal, 1962 Theoretical and experimental results of investigations conducted to determine the effects of residual stresses on fatigue damage accumulation and fatigue life under both constant amplitude and randomized exponential stress distributions of 7075 T6 circumferentially notched rotating bending specimens are presented The variation of the strength reduction factor as a function of prestress and load spectrum is examined An approximate analysis of the elastic plastic stress distribution at the minimum cross section is suggested on the basis of which fatigue behavior can be predicted The results indicated that the linear Miner cumulative damage rule quite generally overestimates fatigue lives except in the alternating plasticity range and that the endurance limit is considerably reduced as a result of stress interaction provided that in the application of the linear damage rule the S N diagram for the prestressed specimen is used In the range of alternating plasticity at the root of the notch 10 super3 **The Shock and Vibration Bulletin**, 1964 [Risk, Reliability and Safety: Innovating Theory and Practice](#) Lesley Walls, Matthew Revie, Tim Bedford, 2016-11-25 The safe and reliable performance of many systems with which we interact daily has been achieved through the analysis and management of risk From complex infrastructures to consumer durables from engineering systems and technologies used in transportation health energy chemical oil gas aerospace maritime defence and other sectors the management of risk during design manufacture operation and decommissioning is vital Methods and models to support risk informed decision making are well established but are continually challenged by technology innovations increasing interdependencies and changes in societal expectations Risk Reliability and Safety contains papers describing innovations in theory and practice contributed to the scientific programme of the European Safety and Reliability conference ESREL 2016 held at the University of Strathclyde in Glasgow Scotland 25-29 September 2016 Authors include scientists academics practitioners regulators and other key individuals with expertise and experience relevant to specific areas Papers include domain specific applications as well as general modelling methods Papers cover evaluation of contemporary solutions exploration of future challenges and
