Polymer Applications of Renewable-Resource Materials Charles E. Carraher Jr., L.H. Sperling, 2012-12-06 For there is hope of a tree If it be cut down That it will sprout again And that the tender branch Thereof will not cease Job XIV 7 Mankind has been blessed with a multitude of resources In the beginning he utilized almost solely replenishable items such as vegetation and animal protein for both nourishment and shelter Gradually such metals as copper and iron were developed and replaced wood as a material of construction Cement and glass although more plentiful than other minerals also replaced the use of growing substances Coal and oil became the primary sources of heat and power Closer to the focus of this book petroleum products began to replace the vegetable oils tannin wool cotton leather silk rubber etc in a host of applications Surely it was argued the new materials did the job better and cheaper What they didn't say is that soon we would run out of oil In any case research on growing natural products now called renewable resources slowed and these industries sought only to maintain their status quo The 20th Century saw an unprecedented emphasis and dependence on nonrenewable resources as energy sources petroleum coal uranium and the fabric of technology drugs clothing shelter tires computer parts The predawn of the 21st Century brings a realization that a cyclic shift back towards the use of renewable resources for technological application is in order Polymer Applications of Renewable Resource Materials Charles E.
